## ACKNOWLEDGMENTS

This study would not have been possible without support from a large number of newly-licensed practical/vocational nurses (LPN/VNs), LPN/VN educators and LPN/VN supervisors from all parts of the U.S. The time and attention they gave to completing the survey is greatly appreciated, and the information they provided has increased our understanding of the work performed by newly-licensed LPN/VNs. NCSBN also gratefully acknowledges the NCLEX® Examination Committee (NEC) for their review and support of this research endeavor.

## EXECUTIVE SUMMARY

The National Council of State Boards of Nursing (NCSBN<sup>®</sup>) is responsible to its members, the boards of nursing in the U.S. and member board territories, for the preparation of psychometrically sound and legally defensible licensure examinations (American Educational Research Association, American Psychological Association and National Council on Measurement in Education, 1999). Practice analysis studies assist NCSBN in evaluating the validity of the test plan that guides content distribution of the licensure examination. Because changes can occur in LPN/VN practice, NCSBN conducts practice analysis studies every three years.

The primary purpose of this study is to identify the knowledge needed by newly-licensed LPN/VNs. Results of this study (i.e., the important knowledge statements) will be used to inform item development. As with other new NCSBN research projects, there is a possibility that the knowledge statements may become an integral part of other processes (e.g., test specifications). However, at this time, these knowledge statements will be used solely to inform item development.

## METHODOLOGY

A number of steps are necessary to perform an analysis of the knowledge needed by newly-licensed LPN/VNs. This section provides a description of the methodology used to conduct the 2009 LPN/VN Nursing Knowledge Survey. Descriptions of subject matter expert (SME) panel processes, survey development, sample selection and data collection procedures are provided, as well as information about confidentiality, response rates and the degree to which participants were representative of the sample of Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors.

### Methodology Reviewers

There were three methodology reviewers, chosen for their psychometric expertise in practice/job analysis and certification exam development, who reviewed the methodologies and procedures utilized in this study. All three reviewers indicated these methodologies were psychometrically sound,

legally defensible and in compliance with professional testing standards.

### Panel of SMEs

A panel of nine LPN/VN SMEs was assembled to assist with the creation of the knowledge statements and survey. Panel members taught LPN/VN students, supervised newly-licensed LPN/VNs or were newly-licensed LPN/VNs themselves. One member also served on the 2009 LPN/VN Practice Analysis Subject Matter Expert Panel and agreed to serve on this panel to provide continuity between the panels. The panelists represented the four NCSBN geographic areas, as well as major nursing specialties and practice settings.

### Survey Development

A number of processes were used to create, evaluate and refine the survey instrument used for the 2009 LPN/VN Nursing Knowledge Survey. In the initial meetings for the triennial practice analysis, a panel of nurses, representing different geographic regions of the country and specialties, met and developed nursing activity statements, which represented newly-licensed LPN/VN practice. These activity statements and the category structure developed by the SMEs provided a categorical structure for the creation of the knowledge statements. Following the work of the first panel, a second group of SMEs convened with one panelist bridging the two panels.

This second panel reviewed the activity statements as provided and then developed knowledge statements for each activity statement. The knowledge statements are intended to provide more detailed information regarding the knowledge needed by newly-licensed LPN/VNs in order to perform nursing activities. The knowledge statements were reviewed and edited by the NEC. The resulting 116 knowledge statements were incorporated into a survey format. In addition to knowledge statements, the NEC felt it was important to gather empirical data regarding the need for newly-licensed LPN/VNs to recall specific normal laboratory values for 30 specific laboratory tests.

The final version of the survey contained four sections. The first section began with the initial identification of responder characteristics and then focused on the knowledge necessary for newly-licensed LPN/VN practice, asking responders to rate the importance of each knowledge statement by using a 1 to 5 point scale. In addition, as noted above, responders were asked whether it is important to memorize 30 specific normal laboratory values (using a yes/no scale). Section two identified the participant's work environment, including area of practice, type of client and employment setting/specialty. Section three focused on demographic information, such as racial/ethnic background, highest obtained education degree and gender. The final section asked participants to provide contact information if they were willing to answer additional questions by phone or e-mail.

## Survey Process

### Sample Selection

*Newly Licensed LPN/VNs:* A random sample of 2,150 LPN/VNs was selected from a list of candidates who passed the NCLEX-PN® Examination between Jan. 1 and Feb. 17, 2009. Only candidates with a U.S. mailing address within the jurisdiction in which they were seeking licensure were included in the sample. This strategy was employed to minimize the number of incorrect addresses to which surveys would be sent.

*LPN/VN Educators:* In addition, surveys were sent to 2,100 LPN/VN Educators at 700 different nursing programs. There were three surveys sent to each dean/director of the nursing program to distribute to (1) a medical/surgical (med/surg) nursing instructor; (2) an obstetrics-gynecology/pediatric (OB-GYN/peds) nursing instructor; and (3) a mental health or community health nursing instructor. Each of the programs in the sample had at a minimum of nine NCLEX candidates within the last two calendar years (2007 and 2008). In the event that faculty was unable to complete the survey, the dean/directors were asked to give the survey to a med/surg faculty member.

*LPN/VN Supervisors:* Finally, 2,100 employers (from 700 nursing homes, 700 hospitals and 700 home

health agencies) of newly-licensed LPN/VNs were surveyed. This list came from a substantially larger mailing list, but the selection of employers to be included in the survey was also based upon the number of LPN/VN employees working for the facility. This criterion was applied in order to maximize the likelihood that the employer would have some newly-licensed LPN/VNs and supervisors of newly-licensed LPN/VNs.

### Representativeness

Because multiple surveys were sent to LPN/VN Educators of the same institution, all responders from an institution were counted as one in the representativeness calculation. The percentage of responders from the various NCSBN member board jurisdictions is similar to the sample distribution.

### Mailing Procedure

Survey forms were mailed to a total of 6,350 potential responders (2,150 Newly Licensed LPN/VNs, 2,100 LPN/VN Educators and 2,100 LPN/VN Supervisors). A five-stage mailing process was used to engage the participants in the study. A presurvey letter was sent to each person or facility selected for the sample. One week later, the survey, with a cover letter and a postage-paid return envelope, was mailed. One week after that, a postcard was sent to all participants reiterating the importance of the study and urging participation. Approximately two weeks after the first postcard, a second reminder postcard was sent. A final reminder was sent to non-responders approximately 10 days after the second reminder. The survey was conducted from April through July 2009.

### Confidentiality

All potential participants were promised confidentiality with regard to their participation and their responses. Preassigned codes were used to facilitate follow-up mailings. Files containing mailing information were kept separate from the data files. The study protocol was approved by NCSBN's CEO for compliance with organizational guidelines for research studies involving human subjects.

## Return Rates

Of the 6,350 surveys sent, 370 were returned due to incorrect addresses, leaving 5,980 valid invitees. Surveys were returned by 1,664 responders for an adjusted return rate of 27.8%. Within each primary job title, the number of surveys returned due to bad addresses was 39 Newly Licensed LPN/VNs, 33 LPN/VN Educators and 298 LPN/VN Supervisors, resulting in adjusted return rates of 25.9%, 39.8% and 16.4%, respectively.

Of the 1,664 surveys received, 69 responders did not hold either an LPN/VN or a registered nurse (RN) license, or failed to answer the question on job title. As part of the quality control procedures, responses from individuals who did not answer these two questions were removed from the database. The analyzable return rates were 24.9%, 39.1% and 14.5% for Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors, respectively. There were 1,595 analyzable surveys or a return rate of 26.7% for the total group.

## Knowledge Survey Nonresponder Study

In order to ensure the validity of the results, NCSBN conducted a telephone survey of nonresponders to determine if those LPN/VNs not responding would have rated the knowledge statements differently than the survey responders. If there are no systematic differences in responders versus nonresponders, it would seem that the results are not biased and the nonresponder study provided evidence to support the validity of survey results. Of the LPN/VNs not participating in the survey, a stratified random sample of Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors were contacted via telephone. Of the potential contacts, a telephone interview was obtained from 90 nurses: 30 Newly Licensed LPN/VNs, 30 LPN/VN Educators and 30 LPN/VN Supervisors. The study found that the majority of nonresponders were either too busy to respond or did not receive the initial survey invitation. More importantly, the study found that the nonresponders rated the knowledge statements similarly to how responders rated them; this similarity supports the validity of the results of this study.

## Summary

### Sample Selection

A panel of SMEs experienced in the practices of newly-licensed LPN/VNs or were newly-licensed LPN/VNs themselves met and created a list of 116 knowledge statements that are important for a newly-licensed LPN/VN to know. A data collection instrument was developed and sent to 6,350 individual nurses. The surveyed nurses were divided into the following primary job titles: 2,150 Newly Licensed LPN/VNs, 2,100 LPN/VN Educators (obtained by sending three surveys to 700 nursing programs) and 2,100 LPN/VN Supervisors (obtained by sending a survey to 700 home health agencies, 700 hospitals and 700 nursing homes). A 26.7% response rate of analyzable surveys was obtained from the total group. This analysis contains the responses of 527 Newly Licensed LPN/VNs, 822 LPN/VN Educators and 246 Supervisors.

## Demographics, Experiences and Practice Environments of Participants

### Demographics/Past Experiences

Demographic information, including racial and ethnic backgrounds, educational preparation and gender are presented next, followed by descriptions of responders' work environments, including settings and client characteristics.

### Nursing Licenses Held

Responders were asked what type of nursing licenses they held, with the option of choosing LPN/VN and/or RN licenses. All of the Newly Licensed LPN/VNs responding to the survey held an LPN/VN license. Only 5.1% of LPN/VN Educators and 5.3% of LPN/VN Supervisors held an LPN/VN license. The remainder of the respondents held RN licenses.

### Gender

The majority of survey responders (93.8%) reported their gender as female: Newly Licensed LPN/VNs (91.6%), LPN/VN Educators (95.9%) and LPN/VN Supervisors (91.7%).

## Survey Adequacy

The responders were asked to rate how well the knowledge statements represented the knowledge areas a newly-licensed LPN/VN should possess by choosing one of four options: Poorly, Adequately, Well or Very Well. The majority of survey responders within each job title reported the survey covered the important knowledge areas of a newly-licensed LPN/VN Well or Very Well. Approximately 92.9% of Newly Licensed LPN/VNs, 92.8% of LPN/VN Educators and 89.6% of LPN/VN Supervisors rated knowledge areas needed by Newly-Licensed LPN/VNs as well or very well.

## Age

Of the responders who elected to provide data regarding their age, Newly Licensed LPN/VNs had an average age of 34.0 years, LPN/VN Educators' average age was 49.9 years and LPN/VN Supervisors' average age was 49.6 years.

## Race/Ethnic Background

White - Not of Hispanic Origin was the ethnic background identified most frequently by Newly Licensed LPN/VNs (55.1%), LPN/VN Educators (89.2%) and LPN/VN Supervisors (85.7%).

## Education Background

The majority of Newly Licensed LPN/VNs (82.9%) reported having an LPN/VN diploma or certificate. Approximately 35.7% of LPN/VN Educators listed their highest degree as an RN Baccalaureate degree or an RN Master's degree earned within the U.S. (22.3%). LPN/VN Supervisors listed their highest degree as RN Associate degree (29.5%) or an RN Baccalaureate degree earned within the U.S. (26.9%).

## Primary Language

The majority of Newly Licensed LPN/VNs (77.6%), LPN/VN Educators (97.4%) and LPN/VN Supervisors (94.2%) reported English as their primary language.

## Years of Experience

Newly Licensed LPN/VNs were asked how long it had been since they graduated from their nursing

program and they reported an average of almost one year (11.6 months). There were large variations in months and years LPN/VN Educators and LPN/VN Supervisors worked in their jobs. LPN/VN Supervisors had spent the longest time at their jobs (16 years) compared to LPN/VN Educators, who spent an average of 8.8 years in their jobs.

## Facilities

The majority of Newly Licensed LPN/VNs (50.9%) and LPN/VN Supervisors (51.1%) worked in long-term care. LPN/VN Educators worked most frequently in hospitals (62.7%).

## Client Health Conditions

The majority of Newly Licensed LPN/VNs (51.0%) worked with clients having stabilized chronic conditions. LPN/VN Educators (69.7%) and LPN/VN Supervisors (60.2%) reported working with clients exhibiting acute conditions. A large percentage of LPN/VN Supervisors also worked with clients having unstabilized chronic health conditions (58.1%). As nurses often work with clients with varying conditions, responders were allowed to give multiple answers, resulting in percentages within each job title totaling more than 100%.

## Client Ages

The most frequent response for Newly Licensed LPN/VNs (69.3%), LPN/VN Educators (75.5%) and LPN/VN Supervisors (83.7%) was caring for older adults aged 65-85. The ability to give multiple answers allows for percentages to equal more than 100%.

## Employment Setting/Specialty

The employment setting most frequently given by Newly Licensed LPN/VNs (46.9%) and LPN/VN Supervisors (50.8%) was nursing homes. LPN/VN Educators (57.5%) most frequently answered med/surg units. On average, for all primary job titles, the least reported employment settings were occupational health (0.2%) and public health (0.8%). Responders were able to answer up to two employment settings, allowing for percentages totaling more than 100%.

## Summary

The average Newly Licensed LPN/VN responder was an English-speaking, White female with an average age of 34 years. She held an LPN/VN diploma/certificate and primarily worked in a long-term care facility caring for older adults (ages 65-85) with stabilized chronic health conditions. She had been an LPN/VN for just under one year.

The average LPN/VN Educator responder was an English-speaking, White female with an average age of 49.9 years. She held an RN Baccalaureate degree from an institution within the U.S. She primarily worked in a hospital caring for older adults (ages 65-85) with acute conditions. She had been an LPN/VN Educator for almost nine years.

The average LPN/VN Supervisor responder was an English-speaking, White female with an average age of 49.6 years. She held an RN Associate or Baccalaureate degree from an institution within the U.S. She worked in long-term care facilities caring for older clients (ages 65-85) exhibiting acute, as well as unstabilized, chronic health conditions. On average, she had been a LPN/VN supervisor for 16 years.

## KNOWLEDGE STATEMENT AND LABORATORY VALUE FINDINGS

### Overview of Methods

The 2009 LPN/VN Nursing Knowledge Survey asked responders to rate the importance of knowledge statements necessary for a newly-licensed LPN/VN to practice safely and effectively. Responders were asked to rate the overall importance of each knowledge statement considering safe and effective professional LPN/VN practice, regardless of practice setting. Importance was rated by using a five-point (1-5) scale.

### SME Validation of Survey Findings

The SME Panel for the 2009 LPN/VNs Nursing Knowledge Survey was asked to provide independent ratings of the 116 knowledge statements.

In order to validate the results of the survey, the importance ratings estimated by SMEs were compared to the average importance ratings from the

knowledge survey. There was, in general, consistency among the highest importance ratings for Newly Licensed LPN/VNs, LPN/VN Educators, LPN/VN Supervisors and SMEs. Additionally, there was consistency among the knowledge statements ranked lowest in importance among Newly Licensed LPN/VNs, LPN/VN Educators, LPN/VN Supervisors and SMEs. There seems to be evidence from several sources that provide convergent validity on the knowledge needed by newly-licensed LPN/VNs in order to practice safely and effectively.

The importance ratings of SMEs compared to the ratings of each subgroup were very similar. In fact, there were no knowledge statement ratings that were one point different between SMEs and Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors. Again, the information on knowledge needed by newly-licensed LPN/VNs from multiple sources provides a more accurate description than a single source.

### Representativeness of Knowledge Statements

The participants were asked whether the knowledge areas listed on the survey represented knowledge that a newly-licensed LPN/VN should possess. A large percentage of Newly Licensed LPN/VNs (64.4%), LPN/VN Educators (56.8%) and LPN/VN Supervisors (62.1%) responded that the survey represented the necessary knowledge Very Well. Moreover, 92.9% of Newly Licensed LPN/VNs, 92.8% of LPN/VN Educators and 89.6% of LPN/VN Supervisors noted that the knowledge statements covered the knowledge that a newly-licensed LPN/VN should possess Well or Very Well.

### Reliability of Instrument

A reliability index (coefficient alpha) was calculated to evaluate the internal consistency of the survey instrument. Alpha coefficients range from 0 to 1; a value of 0.7 or greater is considered adequate (Cronbach, 1951). The resulting value of 0.98 for this survey instrument suggests this survey reliably measures the knowledge that a newly-licensed LPN/VN needs for safe and effective practice.

## Knowledge Statements

### Importance of Knowledge Statements

The safe and effective practice of newly-licensed LPN/VNs was determined by participants' responses based on an importance rating scale. The responders were asked, "How important is the possession of this knowledge by a newly-licensed LPN/VN for safe and effective professional practice, regardless of specific practice setting?" Importance ratings were recorded using a five-point scale: 1 = Not Important; 2 = Marginally Important; 3 = Moderately Important; 4 = Important; and 5 = Critically Important. Average importance ratings were calculated by including all importance ratings regardless of practice setting. The SME panel ratings and survey respondent ratings of the 116 knowledge statements yielded very similar results.

All primary job titles (Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors) rated vital signs and aseptic and sterile techniques among the five most important knowledge statements. In terms of the least important knowledge statements, all primary job titles (including the SMEs) rated insurance requirements and inventory control as the two least important, with alternative/complementary therapy also among the five least important knowledge statements.

### Knowledge Statement Subgroup Analysis

#### Primary Job Title

The average knowledge statement importance ratings of Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors were cross-analyzed for meaningful differences among these job titles. The least important knowledge statement for Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors was insurance requirements, with an average value of 3.15, 2.71 and 2.64, respectively. The most important knowledge statement for Newly Licensed LPN/VNs and LPN/VN Supervisors was vital signs, with an average value of 4.76 and 4.81. LPN/VN Educators rated how to correctly identify clients as the most important knowledge statement,

with an average value of 4.89. In general, there were few differences in importance ratings based upon job title.

#### Facility

The average importance ratings of the knowledge statements for responders from hospitals, long-term care facilities, community-based facilities and other facilities were cross-analyzed for meaningful differences. Responders who worked in one of the four types of facilities rated insurance requirements and inventory control as the least important knowledge statements; the average ratings for insurance requirements were 2.70, 2.96, 3.07 and 2.77 and the average ratings for inventory control were 2.80, 3.00, 3.06 and 2.94, respectively. The most important knowledge statement for responders working in long-term care, community-based and other facilities was vital signs, with average importance ratings of 4.80, 4.78 and 4.87. This knowledge statement was the third most important for responders working in hospitals, with an average rating of 4.85. The two most important knowledge statement for responders working in hospitals were aseptic and sterile techniques, and how to correctly identify clients, both with an average rating of 4.86; aseptic and sterile techniques was the second most important for responders working in community-based facilities and the third most important for responders working in other facilities.

### Laboratory Values

The importance of memorizing specific normal laboratory values with regard to the safe and effective practice of newly-licensed LPN/VNs was determined by participants' yes or no responses to each laboratory value listed in the survey.

### Laboratory Value Subgroup Analysis

#### Primary Job Title

The percentages of responders answering yes to the importance of memorizing the normal laboratory values listed in the survey were cross-analyzed among Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors. Of the Newly Licensed LPN/VNs, 39.7% answered that newly-licensed

nurses needed to know normal lab value for AST (SGOT). There were 17.3% of LPN/VN Educators and 13.6% of LPN/VN Supervisors who answered that newly-licensed nurses needed to remember normal lab value for phosphorus/phosphate. The highest percent answering yes to memorizing the normal lab value for glucose was 95.8% of Newly Licensed LPN/VNs, 96.3% of LPN/VN Educators and 91.4% of LPN/VN Supervisors.

### **Facility**

The need to memorize laboratory values based upon responder answers to the facility demographic was cross-analyzed for possible meaningful differences among the facility settings: hospital, long-term care facility, community-based facility and other. Every facility subgroup answered normal lab value for phosphorus/phosphate as the lowest value percentage, with percentages of 19.0% (hospital), 30.1% (long-term care), 32.0% (community-based facility) and 25.3% (other). Memorizing normal lab value for glucose was answered most often among all four facilities with percentages of 95.8% (hospital), 94.3% (long-term care), 96.1% (community-based facility) and 96.6% (other).

### **Summary**

Responders to the 2009 LPN/VNs Nursing Knowledge Survey found the statements listed in the survey to be representative of the knowledge necessary for safe and effective professional practice of newly-licensed LPN/VNs. There were similar importance ratings of the knowledge statements for Newly Licensed LPN/VNs, LPN/VN Educators, LPN/VN Supervisors and SMEs.

### **CONCLUSION**

Based upon the reliability of the knowledge statement instrument, the survey of nonresponders, the validation of the knowledge statement importance ratings by SME, and the similarity of knowledge statement importance ratings by Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors, the results of this survey can be used to inform item development.

Report of Findings from the

# **2009 LPN/VN Nursing Knowledge Survey**

National Council of State Boards of Nursing, Inc. (NCSBN®)

## BACKGROUND OF STUDY

The National Council of State Boards of Nursing (NCSBN<sup>®</sup>) is responsible to its members, the boards of nursing in the U.S. and member board territories, for the preparation of psychometrically sound and legally defensible licensure examinations (American Educational Research Association, American Psychological Association and National Council on Measurement in Education, 1999). Practice analysis studies assist NCSBN in evaluating the validity of the test plan that guides content distribution of the licensure examination. Because changes can occur in licensed practical/vocational (LPN/VN) practice, NCSBN conducts the practice analysis every three years.

The primary purpose of this study is to identify the knowledge needed by newly-licensed LPN/VNs for safe and effective entry-level practice. Results from this study (i.e., the important knowledge statements) will be used to inform item development. As with other new NCSBN research projects, there is a possibility that the knowledge statements may become an integral part of other processes (e.g., test specifications). However, at this time, these statements will be used solely to inform item development.

## METHODOLOGY

A number of steps are necessary to perform an analysis of the knowledge needed by newly-licensed LPN/VNs. This section provides a description of the methodology used to conduct the 2009 LPN/VN Nursing Knowledge Survey. Descriptions of subject matter expert (SME) panel processes, survey development, sample selection and data collection procedures are provided, as well as information about confidentiality, response rates and the degree to which participants were representative of the population of Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors.

### Methodology Reviewers

There were three methodology reviewers, chosen for their psychometric expertise in practice/job analysis and certification exam development, who reviewed the methodologies and procedures utilized in this study. All three reviewers indicated these methodologies were psychometrically sound, legally defensible and in compliance with professional testing standards. See *Appendix A for a listing of methodology reviewers.*

### Panel of SMEs

A panel of nine LPN/VNs was assembled to assist with the creation of the nursing knowledge survey. Panel members all worked with and/or supervised the practice of newly-licensed LPN/VNs within their first six months of practice or were newly-licensed LPN/VNs themselves. One member served on the 2009 LPN/VN Practice Analysis Subject Matter Expert Panel and agreed to serve on this panel in order to provide continuity between the panels. The panelists also represented the four geographic areas of NCSBN constituents, as well as major nursing specialties. See *Appendix B for a list of panel members.*

### Survey Development

A number of processes were used to create, evaluate and refine the survey instrument used for the 2009 LPN/VN Nursing Knowledge Survey. In the initial meetings for the triennial practice analysis, a

panel of nurses, representing different geographic regions of the country and specialties, met and developed nursing activity statements which represented newly-licensed LPN/VN practice. These activity statements provided a categorical structure for the creation of the knowledge statements. Following the work of the first panel, a second panel of nurses was convened, with one panelist bridging the two panels.

This second panel reviewed the activity statements as provided and then developed knowledge statements for each activity statement. The link between knowledge statements and activity statements can be seen in Appendix O. While developing the knowledge statements for the survey, past practice activity statements were considered. The knowledge statements were then reviewed and edited by the NCLEX® Examination Committee (NEC). The resulting 116 knowledge statements were incorporated into a survey format. In addition to knowledge statements, the NEC felt it was important to gather empirical data regarding the need for newly-licensed LPN/VNs to recall specific normal laboratory values for 30 laboratory tests.

The final version of the survey contained four sections. The first section began with the initial identification of responder characteristics and then focused on the knowledge necessary for newly-licensed LPN/VN practice, asking responders to rate the importance of each knowledge statement by using a 1-5 point scale. In addition, as noted above, responders were asked whether it is important to memorize 30 specific normal laboratory values (choosing either yes or no). Responders were also given the opportunity to indicate how well the survey covered important knowledge areas a newly-licensed LPN/VN should possess, regardless of practice setting, and then to provide suggestions for important knowledge areas not covered by the survey. Section two identified the participant's work environment, including area of practice, type of client and employment setting/specialty. Section three focused on demographic information, such as racial/ethnic background, highest obtained education degree and gender. The final section asked

participants to provide contact information if they would be willing to answer additional questions by phone or e-mail. The survey used in the 2009 LPN/VN Nursing Knowledge Survey may be found in Appendix C.

## Survey Process

### Sample Selection

*Newly Licensed LPN/VNs:* A random sample of 2,150 LPN/VNs was selected from a list of candidates who passed the NCLEX-PN® Examination between Jan. 1 and Feb. 17, 2009. Only candidates with a U.S. mailing address within the jurisdiction in which they were seeking licensure were included in the sample. This strategy was employed to minimize the number of incorrect addresses to which surveys would be sent.

*LPN/VN Educators:* In addition, surveys were sent to 2,100 LPN/VN Educators at 700 different nursing programs. There were three surveys sent to each dean/director of the nursing program with instructions for them to distribute the surveys to (1) a medical/surgical (med/surg) nursing instructor; (2) an obstetrics-gynecology/pediatric (OB-GYN/peds) nursing instructor; and (3) a mental health or

community health nursing instructor. Each of the programs in the sample had a minimum of nine NCLEX candidates within the last two calendar years (2007 and 2008). In the event that faculty was unable to complete the survey, the dean/directors were asked to give the survey to a med/surg faculty member.

*LPN/VN Supervisors:* Finally, 2,100 employers (from 700 nursing homes, 700 hospitals and 700 home health agencies) of newly-licensed LPN/VNs were surveyed. This list came from a substantially larger mailing list, but the selection of employers to be included in the survey was also based upon the number of LPN/VN employees working for the company. This criterion was applied in order to maximize the likelihood that the employer would have some newly-licensed LPN/VNs and supervisors of newly-licensed LPN/VNs.

### Representativeness

Table 1 presents the correspondence of samples and responders within each primary job title by NCSBN jurisdiction. Because multiple surveys were sent to LPN/VN Educators of an institution, all responders from a single institution were counted only as one in the representativeness calculation. As shown in

**Table 1. Representativeness of Responders by NCSBN Jurisdiction**

Jurisdiction	Newly Licensed LPN/VN				LPN/VN Educator				LPN/VN Supervisor

Table 1, the percentage of responders from different jurisdictions is similar to the sample distribution.

**Mailing Procedure**

Survey forms were mailed to a total of 6,350 potential responders (2,150 Newly Licensed LPN/VNs, 2,100 LPN/VN Educators and 2,100 LPN/VN Supervisors). A five-stage mailing process was used to engage the participants in the study. A presurvey letter was sent to each person or facility selected for the sample. One week later, the survey, with a cover letter and a postage-paid return envelope, was mailed. One week after that, a postcard was sent to all participants reiterating the importance of the study and urging participation. Approximately two weeks after the first postcard, a second reminder postcard was sent. A final reminder was sent to non-responders approximately 10 days after the second reminder. The survey was conducted from April through July 2009.

**Confidentiality**

All potential participants were promised confidentiality with regard to their participation and their responses. Preassigned codes were used to

facilitate follow-up mailings. Files containing mailing information were kept separate from the data files. The study protocol was approved by NCSBN’s CEO for compliance with organizational guidelines for research studies involving human subjects.

**Return Rates**

Of the 6,350 surveys sent, 370 were returned due to incorrect addresses, leaving 5,980 valid invitees. Surveys were returned by 1,664 responders for an adjusted return rate of 27.8%. Within each primary job title, the number of surveys returned due to bad addresses was 39 Newly Licensed LPN/VNs, 33 LPN/VN Educators and 298 LPN/VN Supervisors, resulting in adjusted return rates of 25.9%, 39.8% and 16.4%, respectively. *See Table 2 for adjusted return rates.*

Of the 1,664 surveys received, 69 responders did not hold either an LPN/VN or RN license or failed to answer the question on job title. As part of the quality control procedures, responses from individuals who did not answer these two questions were removed from the database. The analyzable return rates were 24.9%, 39.1% and 14.5% for Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN

**Table 2. Adjusted Return Rates**

Job title	Sample	Bad Addresses	Surveys Sent	Adjusted Responses	Adjusted Return Rate
Newly Licensed PNs	2,150	39	2,111	546	25.90%
Educators	2,100	33	2,067	823	39.80%
Supervisors	2,100	298	1,802	295	16.40%
Total	6,350	370	5,980	1,664	27.80%

**Table 3. Analyzable Return Rates**

Job title	Surveys Sent	Invalid Responses	Analyzable Responses	Analyzable Return Rate
Newly Licensed PNs	2,111	21	525	24.90%
Educators	2,067	14	809	39.10%
Supervisors	1,802	34	261	14.50%
Total	5,980	69	1,595	26.70%

Supervisors, respectively; as seen in Table 3. There were 1,595 analyzable surveys or a return rate of 26.7% for the total group.

### **Knowledge Survey Nonresponder Study**

In order to ensure the validity of the results, NCSBN conducted a telephone survey of nonresponders to determine if those LPN/VNs not responding would have rated the Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors knowledge statements differently than the survey responders. If there are no systematic differences in responders versus nonresponders, it would seem that the results are not biased and the nonresponder study provided evidence to support the validity of survey results. A stratified random sample of Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors who did not participate in the survey were contacted via telephone. Of the potential contacts, a telephone interview was obtained from a total of 90 nurses: 30 Newly Licensed LPN/VNs, 30 LPN/VN Educators and 30 LPN/VN Supervisors. The study found that the majority of nonresponders were either too busy to respond or did not receive the initial survey invitation. More importantly, the study found that the nonresponders rated the knowledge statements similarly to how responders rated them; this similarity supports validity of the results of this study. *See Appendix N for the results of the nonresponder study.*

### **Summary**

A panel of nine SMEs met and created a list of knowledge statements necessary for competent job performance relating to public safety. A data collection instrument was developed and sent to 6,350 individual nurses. The surveyed nurses were divided into the following primary job titles: 2,150 Newly Licensed LPN/VNs, 2,100 LPN/VN Educators and 2,100 LPN/VN Supervisors. An overall 26.7% response rate of analyzable surveys was obtained. This analysis contains the responses of 527 newly-licensed LPN/VNs, 822 LPN/VN Educators and 246 Supervisors.<sup>1</sup>

<sup>1</sup> The numbers of responses for the analyses do not match the numbers for each primary job title shown in Table 3. This occurred because the statistics in Tables 1-3 were derived from the primary job title to which the survey was mailed, whereas the analyses were conducted based upon the primary job title to which the respondent identified themselves.

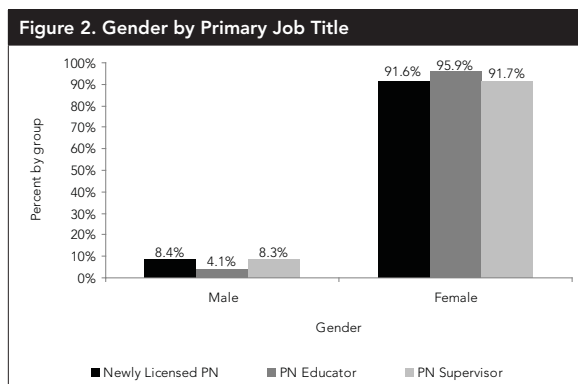

## DEMOGRAPHICS, EXPERIENCES, AND PRACTICE ENVIRONMENTS OF PARTICIPANTS

### Demographics/Past Experiences

Demographic information, including racial and ethnic backgrounds, educational preparation and gender are presented next, followed by descriptions of responders’ work environments, including settings and client characteristics.

### Nursing Licenses Held

Responders were asked what type of nursing licenses they held, with the option of choosing LPN/ VN and/or RN licenses. All of the Newly Licensed LPN/VNs held an LPN/VN license. Only 5.1% of the LPN/VN Educators and 5.3% of LPN/VN Supervisors held an LPN/VN license. The remainder of the respondents held registered nurse (RN) licenses. Responders were allowed to select both licenses, so percentages do not add up to 100%. See Figure 1 for a graphical representation of licenses held by primary job title.

### Gender

The majority of survey responders (93.8%) reported their gender as female: Newly Licensed LPN/VNs (91.6%), LPN/VN Educators (95.9%) and LPN/VN Supervisors (91.7%). There were 24 responders who chose not to provide data regarding their gender. See Figure 2 for gender sorted by primary job title.

### Survey Adequacy

The responders were asked to rate how well the knowledge statements represented the knowledge areas a newly-licensed LPN/VN should possess by choosing one of four options: Poorly, Adequately, Well or Very Well. The majority of survey responders within each job title reported that the survey covered the important knowledge areas of a newly-licensed LPN/VN Well or Very Well. Approximately 92.9% of Newly Licensed LPN/VNs, 92.8% of LPN/VN Educators and 89.6% of LPN/VN Supervisors rated the survey as covering knowledge Well or Very Well. There were 35 responders who elected not to provide this rating. See Figure 3 for adequacy of knowledge statement coverage sorted by primary job title.

### Age

Of the responders who elected to provide data regarding their age, Newly Licensed LPN/VNs had an average age of 34.0 years, LPN/VN Educators’ average age was 49.9 years and LPN/VN Supervisors’ average age was 49.6 years.

### Race/Ethnic Background

White - Not of Hispanic Origin was the ethnic background identified most frequently by Newly Licensed LPN/VNs (55.1%), LPN/VN Educators (89.2%) and LPN/VN Supervisors (85.7%). There were 45 responders who did not provide data concerning their racial/ethnic background. See Figure 4 for the racial/ethnic backgrounds of survey responders sorted by primary job title.

Figure 3. Survey Coverage Adequacy by Primary Job Title

Figure 4. Race/Ethnic Background by Primary Job Title

**Education Background**

The majority of Newly Licensed LPN/VNs (82.9%) reported having an LPN/VN diploma or certificate. Approximately 35.7% of LPN/VN Educators listed their highest degree as an RN Baccalaureate degree or an RN Master’s degree earned within the U.S. (22.3%). LPN/VN Supervisors listed their highest degree as RN Associate degree (29.5%) or an RN Baccalaureate degree earned within the U.S. (26.9%). There were 78 responders who elected not to answer this question. See Figure 5 for the educational background of responders sorted by primary job title.

**Primary Language**

The majority of Newly Licensed LPN/VNs (77.6%), LPN/VN Educators (97.4%) and LPN/VN Supervisors (94.2%) reported English as their primary language. There were 24 responders who elected not to answer this question. See Figure 6 for primary language sorted by primary job title.

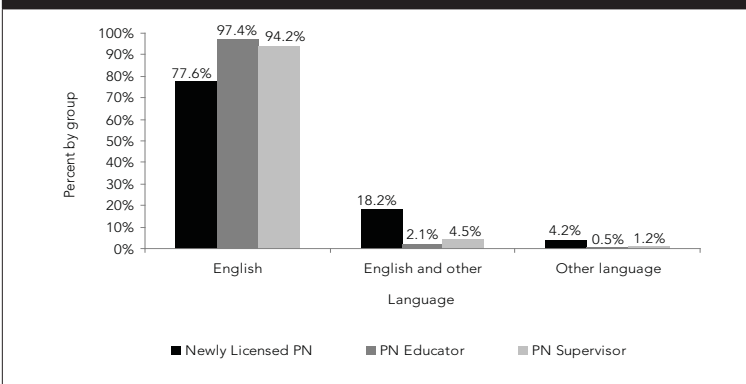

**Years of Experience**

Newly Licensed LPN/VNs were asked how long it had been since they graduated from their nursing program and they reported an average of almost one year (11.6 months). There were large variations

**Figure 5. Educational Background by Primary Job Title**

**Figure 6. Primary Language by Primary Job Title**

in months and years LPN/VN Educators and LPN/VN Supervisors worked in their jobs. LPN/VN Supervisors had spent the longest time at their jobs (16 years) compared to LPN/VN Educators, who spent an average of 8.8 years in their jobs.

**Facilities**

The majority of Newly Licensed LPN/VNs (50.9%) and LPN/VN Supervisors (51.1%) worked in long-term care. LPN/VN Educators worked most frequently in

hospitals (62.7%). See Figure 7 for responder nurses' facility sorted by primary job title.<sup>2</sup>

**Client Health Conditions**

The majority of Newly Licensed LPN/VNs (51.0%) worked with clients having stabilized chronic conditions. LPN/VN Educators (69.7%) and LPN/VN Supervisors (60.2%) reported working with clients exhibiting acute conditions; though a large percentage of LPN/VN Supervisors also worked with

<sup>2</sup> Academia is not included as one of the options in the question that asks respondents to indicate the primary facility in which they worked.

Figure 7. Facility by Primary Job Title

Figure 8. Client Health Conditions

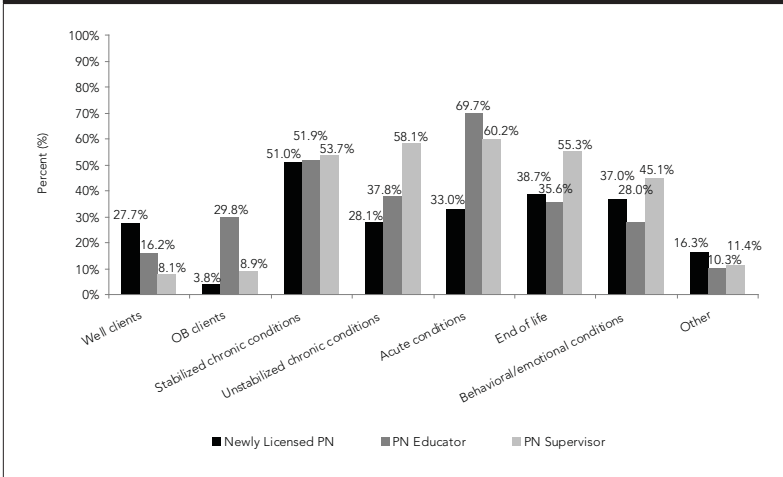

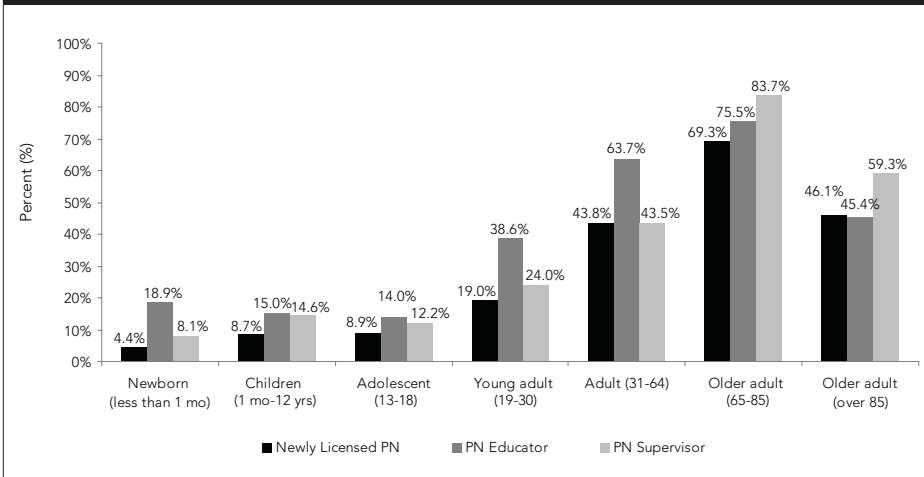

Figure 9. Client Ages by Primary Job Title

clients having unstabilized chronic health conditions (58.1%). As nurses often work with clients with varying conditions, responders were allowed to give multiple answers, resulting in percentages within each job title totaling more than 100%. See *Figure 8 for client conditions sorted by primary job title.*

### Client Ages

The most frequent response for Newly Licensed LPN/VNs (69.3%), LPN/VN Educators (75.5%) and LPN/VN Supervisors (83.7%) was caring for older adults aged 65-85. The ability to give multiple answers allows for percentages to equal more than 100%. See *Figure 9 for client ages sorted by primary job title.*

### Employment Setting/Specialty

The employment setting most frequently given by Newly Licensed LPN/VNs (46.9%) and LPN/VN Supervisors (50.8%) was nursing homes. LPN/VN Educators (57.5%) most frequently answered med/surg units. On average, for all primary job titles, the least reported employment settings were occupational health (0.2%) and public health (0.8%). Responders were able to answer up to two employment settings, allowing for percentages totaling more than 100%. See *Table 4 for employment settings and specialties.*

**Table 4. Employment Setting/Specialty**

Employment Setting	Newly Licensed LPN/VN		LPN/VN Educator		LPN/VN Supervisor		Total

## Summary

The average Newly Licensed LPN/VN responder was an English-speaking, White female with an average age of 34 years. She held an LPN/VN diploma/certificate and primarily worked in a long-term care facility caring for older adults (ages 65-85) with stabilized chronic health conditions. She had been an LPN/VN for just under one year.

The average LPN/VN Educator responder was an English-speaking, White female with an average age of 49.9 years. She held an RN Baccalaureate degree from an institution within the U.S. She primarily worked in a hospital caring for older adults (ages 65-85) with acute conditions. She had been an LPN/VN Educator for almost nine years.

The average LPN/VN Supervisor responder was an English-speaking, White female with an average age of 49.6 years. She held an RN Associate or Baccalaureate degree from an institution within the U.S. She worked in long-term care facilities caring for older clients (ages 65-85) exhibiting acute, as well as unstabilized, chronic health conditions. On average, she had been a LPN/VN supervisor for 16 years.

## KNOWLEDGE STATEMENT AND LABORATORY VALUE FINDINGS

### Overview of Methods

The 2009 LPN/VN Nursing Knowledge Survey asked responders to rate the importance of knowledge statements necessary for a newly-licensed LPN/VN to practice safely and effectively. Responders were asked to rate the overall importance of each knowledge statement considering safe and effective professional LPN/VN practice, regardless of practice setting. Importance was rated by using a five-point (1-5) scale.

### SME Validation of Survey Findings

The SME Panel for the 2009 LPN/VNs Nursing Knowledge Survey was asked to provide independent ratings of the 116 knowledge statements. See *Appendix D* for average importance ratings by SMEs.

In order to validate the results of the survey, the importance ratings estimated by SMEs were compared to the average importance ratings from the knowledge survey. As can be seen in Table 5, there was, in general, consistency among the highest importance ratings for Newly Licensed LPN/VNs, LPN/VN Educators, LPN/VN Supervisors and SMEs. Additionally, there was consistency among the knowledge statement ranked lowest in importance among Newly Licensed LPN/VNs, LPN/VN Educators, LPN/VN Supervisors and SMEs. There seems to be evidence from several sources that provide convergent validity on the knowledge needed by newly-licensed LPN/VNs in order to practice safely and effectively. The ratings of SMEs compared to survey responder ratings, categorized by job titles, are presented in Appendices E, F and G.

The importance ratings of SMEs compared to the ratings of each subgroup were very similar. In fact, there were no knowledge statement ratings that were one point different between the SMEs and the Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors. Again, the information on knowledge needed by newly-licensed LPN/VNs from multiple sources provides a more accurate description than a single source.

### Representativeness of Knowledge Statements

The participants were asked whether the knowledge areas listed on the survey represented knowledge a newly-licensed LPN/VN should possess. A large percentage of Newly Licensed LPN/VNs (64.4%), LPN/VN Educators (56.8%) and LPN/VN Supervisors (62.1%) responded that the survey represented the necessary knowledge Very Well. Moreover, 92.9% of Newly Licensed LPN/VNs, 92.8% of LPN/VN Educators and 89.6% of LPN/VN Supervisors noted that the knowledge statements covered the knowledge that a newly-licensed LPN/VN should possess Well or Very Well.

### Reliability of Instrument

A reliability index (coefficient alpha) was calculated to evaluate the internal consistency of the survey instrument. Alpha coefficients range from 0 to 1; a value of 0.7 or greater is considered adequate (Cronbach, 1951). The resulting value of 0.98 for this survey instrument suggests this survey reliably measures the knowledge that a newly-licensed LPN/VN needs for safe and effective practice.

## Knowledge Statements

### Importance of Knowledge Statements

The knowledge needed by newly-licensed LPN/VNs was determined by participants' responses to an importance scale. The responders were asked, "How important is the possession of this knowledge by a newly-licensed LPN/VN for safe and effective professional practice, regardless of specific practice setting?" Importance ratings were recorded using a five-point scale: 1 = Not Important; 2 = Marginally Important; 3 = Moderately Important; 4 = Important; and 5 = Critically Important. Average importance ratings were calculated by including all importance ratings regardless of practice setting. The SME panel ratings and survey respondent ratings of the 116 knowledge statements yielded very similar results.

**Table 5. Most and Least Important Knowledge Statements**

Most Important Knowledge Statements							
Newly Licensed LPN/VNs		LPN/VN Educators		LPN/VN Supervisors		SMEs	
Knowledge of:	Average	Knowledge of:	Average	Knowledge of:	Average	Knowledge of:	Average
	1-5 scale		1-5 scale		1-5 scale		1-5 scale
vital signs	4.76	how to correctly identify client	4.89	vital signs	4.81	how to correctly identify client	5.00
aseptic and sterile techniques	4.75	rights of medication administration	4.88	critical signs and symptoms	4.78	vital signs	4.83
signs and symptoms of allergic reaction	4.75	vital signs	4.88	rights of medication administration	4.77	critical signs and symptoms	4.83
critical signs and symptoms	4.73	aseptic and sterile techniques	4.85	aseptic and sterile techniques	4.74	infection control	4.83
infection control	4.72	confidentiality	4.84	standard/universal precautions	4.72	rights of medication administration	4.83
Least Important Knowledge Statements							
Newly Licensed LPN/VNs		LPN/VN Educators		LPN/VN Supervisors		SMEs	
Knowledge of:	Average	Knowledge of:	Average	Knowledge of:	Average	Knowledge of:	Average
	1-5 scale		1-5 scale		1-5 scale		1-5 scale
insurance requirements	3.15	insurance requirements	2.71	insurance requirements	2.64	insurance requirements	1.83
inventory control	3.26	inventory control	2.74	inventory control	2.74	inventory control	2.67
alternative/complementary therapy	3.31	fetal monitoring	3.08	fetal monitoring	2.85	alternative/complementary therapy	2.67
referral process	3.47	fiscal responsibility	3.08	alternative/complementary therapy	2.97	community resources	2.67
learning styles	3.48	alternative/complementary therapy	3.14	stages of labor	3.07	fiscal responsibility	2.83

The five least important and the five most important knowledge statements for all primary job titles are shown in Table 5. All primary job titles (Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors) rated vital signs, and aseptic and sterile techniques among the five most important knowledge statements. In terms of the least important knowledge statements, all primary job titles (including SMEs) rated insurance requirements, inventory control as the two least important, with alternative/complementary therapy also among the five least important knowledge statements.

The average importance ratings sorted by primary job title (Newly Licensed LPN/VN, LPN/VN Educator and LPN/VN Supervisor) for all of the knowledge statements are presented in Table 6. Additionally, Appendices E, F and G present the information in rank order of importance for each of the primary job titles as compared to ratings of SMEs.

## Knowledge Statement Subgroup Analysis

### Primary Job Title

The average knowledge statement importance ratings of Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors were cross-analyzed for meaningful differences among these job titles. Appendix J presents a table with each knowledge statement's average value for each primary job title. The least important knowledge statement for Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors was insurance requirements, with an average value of 3.15, 2.71 and 2.64, respectively. The most important knowledge statement for Newly Licensed LPN/VNs and LPN/VN Supervisors was vital signs, with an average value of 4.76 and 4.81. LPN/VN Educators rated how to correctly identify clients as the most important knowledge statement, with an average value of 4.89. In general, there were few differences in importance ratings based upon job title.

### Facility

The average importance ratings of the knowledge statements for responders from hospitals, long-term care facilities, community-based facilities and other facilities were cross-analyzed for meaningful differences. Responders who worked in all four types of facilities rated insurance requirements and inventory control as the least important knowledge statements; the average ratings for insurance requirements were 2.70, 2.96, 3.07 and 2.77 and the average ratings for inventory control were 2.80, 3.00, 3.06 and 2.94, respectively. The most important knowledge statement for responders working in long-term care, community-based and other facilities was vital signs, with average importance ratings of 4.80, 4.78 and 4.87. This knowledge statement was the third most important for responders working in hospitals, with an average rating of 4.85. The two most important knowledge statement for responders working in hospitals were aseptic and sterile techniques, and how to correctly identify clients, both with an average rating of 4.86; aseptic and sterile techniques was the second most important for responders working in community-based

facilities and the third most important for responders working in other facilities. Average importance values for all knowledge statements by facility appear in Appendix K.

## Laboratory Values

The importance of memorizing specific normal laboratory values with regard to the safe and effective practice of newly-licensed LPN/VNs was determined by participants' yes or no responses to each laboratory value listed in the survey. The percentage of responders answering yes to each of the 30 laboratory values appears in Appendix H in survey order and can also be found ranked by percentage answering yes in Appendix I and in Table 7.

## Laboratory Value Subgroup Analysis

### Primary Job Title

The percentages of responders answering yes to the importance of memorizing the laboratory values listed in the survey were cross-analyzed among Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors. Of those lowest values, 39.7% of Newly Licensed LPN/VNs answered that newly-licensed nurses needed to know normal lab value for AST (SGOT). There were 17.3% of LPN/VN Educators and 13.6% of LPN/VN Supervisors who answered that newly-licensed nurses needed to remember normal lab value for phosphorus/phosphate. In terms of highest percentage answering yes to memorizing lab values, 95.8% of Newly Licensed LPN/VNs, 96.3% of LPN/VN Educators and 91.4% of LPN/VN Supervisors answered yes to normal lab value for glucose. A table including all average ratings for laboratory values by primary job titles can be found in Appendix L.

### Facility

The need to memorize laboratory values based upon responder answers to the facility demographic was cross-analyzed for possible meaningful differences among the facility settings: hospital, long-term care facility, community-based facility and other. Every facility subgroup answered normal lab value for phosphorus/phosphate as the lowest value

<b>Lab Values</b>		<b>N</b>	<b>%</b>
Lab26	Normal lab value for phosphorus/ phosphate	1572	25.4
Lab16	Normal lab value for AST (SGOT)	1571	28.6
Lab14	Normal lab value for ALT (SGPT)	1572	28.8
Lab22	Normal lab value for ESR	1566	29.8
Lab15	Normal lab value for ammonia	1575	31.5
Lab27	Normal lab value for protein (total)	1566	33.5
Lab23	Normal lab value for lithium	1574	37.2
Lab17	Normal lab value for bilirubin	1574	37.5
Lab13	Normal lab value for albumin (blood)	1568	38.7
Lab24	Normal lab value for magnesium	1571	41.2
Lab19	Normal lab value for cholesterol (HDL and LDL)	1571	51.0
Lab29	Normal lab value for urine (alb, pH, white blood cell count [WBC] and %T lymphocytes [differential])	1573	53.5
Lab3	Normal lab value for cholesterol (total)	1569	53.7
Lab2	Normal lab value for arterial blood gases (pH <sub>1</sub> , PO <sub>2</sub> , PCO <sub>2</sub> , SaO <sub>2</sub> , HCO <sub>3</sub> )	1578	56.8
Lab7	Normal lab value for hemoglobin A1C (HbA <sub>1C</sub> )	1574	60.7
Lab20	Normal lab value for creatinine	1574	67.0
Lab18	Normal lab value for bleeding time	1577	69.1
Lab25	Normal lab value for PTT and APTT	1578	70.5
Lab21	Normal lab value for digoxin	1571	72.3
Lab10	Normal lab value for red blood count (RBC)	1577	72.5
Lab8	Normal lab value for platelets	1567	72.8
Lab30	Normal lab value for International Normalized Ratio (INR)	1578	75.5
Lab1	Normal lab value for BUN (blood, urea, nitrogen)	1581	76.9
Lab28	Normal lab value for prothrombin time (PT)	1575	78.3
Lab11	Normal lab value for sodium (Na <sup>+</sup> )	1580	84.4
Lab5	Normal lab value for hematocrit (Hct)	1583	88.1
Lab6	Normal lab value for hemoglobin (Hgb)	1581	90.1
Lab12	Normal lab value for white blood count (WBC)	1583	90.5
Lab9	Normal lab value for potassium (K <sup>+</sup> )	1582	91.8
Lab4	Normal lab value for glucose	1584	95.4

percentage, with percentages of 19.0% (hospital), 30.1% (long-term care), 32.0% (community-based facility) and 25.3% (other). Memorizing normal lab value for glucose was answered most often among all four facilities with percentages of 95.8% (hospital), 94.3% (long-term care), 96.1% (community-based facility) and 96.6% (other). A table including all average values for the facility subgroup analysis can be found in Appendix M.

## Summary

Responders to the 2009 LPN/VNs Nursing Knowledge Survey found the statements listed in the survey to be representative of the knowledge necessary for safe and effective professional practice of newly-licensed LPN/VNs. In terms of importance of certain laboratory values to commit to memory, some discrepancies were found among ratings of Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors. There were similar importance ratings of the knowledge statements for Newly Licensed LPN/VNs, LPN/VN Educators, LPN/VN Supervisors and SMEs.

## CONCLUSIONS

Based upon the reliability of the knowledge statement instrument, the survey of nonresponders, the validation of the knowledge statement importance ratings by SMEs, and the similarity of knowledge statement importance ratings by Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors, as well as the rigorous process used for survey development, the results of this survey can be used to inform item development.

## APPENDIX A: 2009 LPN/VN NURSING KNOWLEDGE SURVEY METHODOLOGY REVIEWERS

**Deirdre Knapp, PhD**, is the director of the Assessment, Training, and Policy Studies Division at the Human Resources Research Organization (HumRRO). She also serves as vice president of the organization. Knapp has over 25 years of experience in conducting and managing personnel and testing related research. Her research emphasis is on designing and administering performance assessments. In that capacity, Knapp is a leader in the field of job analyses and practice analyses. Prior to her 20 years of service in HumRRO, she worked as a research psychologist at the U.S. Army Research Institute for the Behavioral and Social Sciences (ARI).

**Ira Bernstein, PhD**, is a professor in the Department of Clinical Sciences at the University of Texas Southwestern Medical Center. He also holds joint appointments at the University of Texas School of Health Professions and at the University of Texas at Arlington. For the last 10 years, Dr. Bernstein has served as consulting editor for a number of peer review journals, such as *Behavior Research Methods* and *Educational and Psychological Measurements*. Bernstein is an expert in the field of measurement and psychometric. He is one of the researchers funded by the NCSBN Joint Research Committee (JRC) in 2009.

**Michael Rosenfeld, PhD**, is president of Rosenfeld and Associates. His recent research focused on the development of job analysis procedures as a basis for designing assessment measures, documenting their validity and using the results of job analysis in curriculum design. Throughout his 30 plus years of experience in the testing industry, he has worked on many important testing issues, such as the Americans with Disabilities Act (ADA). Rosenfeld is a lead auditor for the American National Standards Institute in their program accrediting credentialing organizations. He also serves as co-editor of *CLEAR Exam Review*, a professional testing journal. Prior to his work with Rosenfeld and Associates, Rosenfeld conducted and managed a wide variety of applied research projects for both the American Institutes for Research (AIR) and Educational Testing Service (ETS).

## APPENDIX B: SUBJECT MATTER EXPERT PANEL FOR THE 2009 LPN/VN NURSING KNOWLEDGE SURVEY

### Area I

- Member:** Tammy Talley, LPN  
Executive Director  
Riverside Health Care Center
- Board:** Montana State Board of Nursing
- Specialty:** Long-Term Care Nursing

Talley has worked for 20 years in practical nursing with experience in physician's clinics and long-term care. She oversees a 72-bed facility operation, including staffing, budgets, communicating with residents and family members, as well as communications with physicians. She is responsible for Quality Assurance/Continuous Quality Improvement, Occupational Safety and Health Administration regulations, workman's compensation, safety committee, staff education and survey compliance issues. As administrator of her facility, Talley is also involved in the hiring and selection of new staff. She pairs new nurses with nurses of similar interests and backgrounds, and personally meets with each new nurse weekly to oversee their orientation.

- Member:** Mary Banayat, RN  
Faculty
- Board:** Arizona State Board of Nursing
- Specialty:** Faculty

Banayat has more than five years of nursing experience, with practical nursing experience in telemetry and med/surg. She currently teaches in an LPN/VN program and has experience orienting and precepting new LPN/VNs.

### Area II

- Member:** Margaret Birkholz, LPN  
Clinical Nursing Supervisor  
Altru Health System
- Board:** North Dakota Board of Nursing
- Specialty:** Med/Surg Nursing

Birkholz has 25 years of practical nursing experience in family practice. She supervises LPN/VNs in obstetrics, pediatrics, psychiatric, internal medicine and anesthetics departments. She was a member of the North Dakota Board of Nursing Practice Subcommittee (2006-2008) and a past member of Utilization Research and Review Committees. In her current role, she participates in the orientation and mentoring of new nurses to the organization.

### Area III

**Member:** Tina Nicholson, RN  
Charge Nurse  
St. Vincent's Birmingham

**Board:** Alabama Board of Nursing

**Specialty:** Med/Surg/Telemetry Nursing

Nicholson has seven years of nursing experience as a charge nurse on a med/surg/telemetry unit. She also has experience in orthopedics and neurology. Additionally, she is involved with the orientation process of newly-licensed LPN/VNs and serves as a preceptor on her unit.

**Member:** Sandra Foss, RN  
Unit Supervisor  
South Austin Hospital

**Board:** Texas Board of Nursing

**Specialty:** Med/Surg Nursing

Foss has 40 years of nursing experience as a unit supervisor on a med/surg unit. She works with entry level LPN/VNs and provides direct care to orthopedic/neurology patients, as well as oncology and pediatric patients.

**Member:** Deborah Murray, RN  
Director of Clinical Services  
Growing Child Pediatrics

**Board:** North Carolina Board of Nursing

**Specialty:** Pediatric Health Nursing

Murray has 11 years of nursing experience in pediatric health. She oversees staffing at multiple locations for a large pediatric practice in North Carolina and coordinates internships with several area LPN/VN schools.

**Member:** Felicia Whitaker, LPN  
Staff  
LSU Health Services Center

**Board:** Louisiana-PN Board of Nursing

**Specialty:** Psychiatric Nursing

Whitaker is a new LPN/VN graduate with practical nursing experience in psychiatric and long-term care.

**Area IV**

**Member:** Melanie Terrano, LPN  
Charge Nurse  
Windsor County Corrections

**Board:** Vermont Board of Nursing

**Specialty:** Geriatrics, Corrections Nursing

Terrano is a new LPN/VN graduate with practical nursing experience in med/surg, triage, geriatrics and corrections.

**Member:** Christine Naas, LPN  
Staff  
Southern New Hampshire Medical Center

**Board:** New Hampshire Board of Nursing

**Specialty:** Acute Care

Naas has over 25 years of nursing experience with clinical experience in acute care, critical care/ICU, pre-op, med/surg, psychiatrics and pediatrics. She serves as a member of the Southern New Hampshire Medical Center Ethics Committee and is a board of nursing liaison to the Practice and Education Committee.

**SECTION 1: KNOWLEDGE STATEMENTS**

This section contains a list of knowledge statements applicable to nursing practice in a variety of settings. For each knowledge statement, please mark the degree of importance, whether or not it applies to your practice setting. For each knowledge statement, one question is asked:

Question - Importance: How important is the possession of this <u>knowledge</u> by a newly licensed LPN/VN for safe and effective professional practice, <u>regardless of specific practice setting</u> ? (Select one) 1 = Not Important, 2 = Marginally Important, 3 = Moderately Important, 4 = Important and 5 = Critically Important	Importance				
	1 = Not Important	2 = Marginally Important	3 = Moderately Important	4 = Important	5 = Critically Important

| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for ammonia                                                                                              |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for AST (SGOT)                                                                                           |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for bilirubin                                                                                            |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for bleeding time                                                                                        |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for cholesterol (HDL and LDL)                                                                            |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for creatinine                                                                                           |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for digoxin                                                                                              |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for ESR                                                                                                  |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for lithium                                                                                              |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for magnesium                                                                                            |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for PTT and APTT                                                                                         |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for phosphorus/phosphate                                                                                 |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for protein (total)                                                                                      |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for prothrombin time (PT)                                                                                |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for urine (alb, pH, white blood cell count [WBC] and %T lymphocytes [differential])                      |
| <input type="radio"/> Yes | <input type="radio"/> No | Normal lab value for International Normalized Ratio (INR)                                                                 |

2. How well did this survey cover the important knowledge areas a newly licensed LPN/VN should possess, regardless of the practice setting?

- Very well
- Well
- Adequately
- Poorly

Please list any important knowledge areas you believe that a newly licensed LPN/VN should possess that are missing from this survey.

## SECTION 2: WORK ENVIRONMENT

**INSTRUCTIONS FOR NEWLY LICENSED LPN/VNs:** Choose the following clinical setting or practice area that most accurately describes where you work.

**INSTRUCTIONS FOR LPN/VN NURSE EDUCATORS:** Choose the following clinical setting or practice area that most accurately describes where you supervise your students.

**INSTRUCTIONS FOR LPN/VN NURSE SUPERVISORS:** Choose the following clinical setting that most accurately describes the general population you supervise and/or the unit on which you work.

1. Which of the following best describes your area of practice? (Select all that apply)
  - Well clients, possibly with minor illnesses
  - OB (Maternity) clients
  - Clients with stabilized chronic conditions
  - Clients with unstabilized chronic conditions
  - Clients with acute conditions, including clients with medical, surgical or critical conditions
  - Clients at end of life
  - Clients with behavioral/emotional conditions
  - Other, please specify: \_\_\_\_\_
  
2. Which of the following best describes the ages of the majority of your clients? (Select all that apply)
  - Newborns (less than 1 month)
  - Infants/children (1 month-12 years)
  - Adolescent (ages 13-18)
  - Young Adult (ages 19-30)
  - Adult (ages 31-64)
  - Older Adult (65-85)
  - Older Adult (85 years and older)
  
3. Which of the following choices best describes your employment setting/specialty area? If you work mainly in one setting, fill in the appropriate oval for that one setting. If you work in more than one setting, fill in the appropriate oval for all settings where you spend at least one-half of your time. (Select no more than two answers)
  - Critical care (e.g., ICU, CCU, step-down units, pediatric/neonatal intensive care, emergency department, post-anesthesia recovery unit)
  - Medical-surgical unit or any of its sub-specialties (e.g., oncology, orthopedics, neurology)
  - Pediatrics
  - Nursery
  - Labor and delivery
  - Postpartum unit
  - Psychiatry or any of its sub-specialties (e.g., detox)
  - Operating room, including outpatient surgery and surgicenters
  - Assisted living
  - Nursing home, skilled or intermediate care
  - Other long-term care (e.g., residential care, developmental disability)
  - Rehabilitation
  - Subacute unit
  - Transitional care unit
  - Physician/dentist office
  - Occupational health
  - Outpatient clinic
  - Home health, including visiting nurses associations
  - Public health
  - Student/school health
  - Hospice care
  - Prison/correctional facility/jail
  - Other, please specify: \_\_\_\_\_
  
4. Which of the following best describes the type of facility/organization where your employment setting/specialty area is located? (Select only one)
  - Hospital
  - Long-term care
  - Community-based or ambulatory care facility/organization (including public health department, visiting nurses association, home health, physician/dentist office, clinic, school, prison, etc.)
  - Other, please specify: \_\_\_\_\_

## APPENDIX H: LABORATORY VALUES SORTED BY SURVEY ORDER

Preface: Is it important for the newly-licensed LPN/VN to memorize the following laboratory values?

Table H. Laboratory Values Sorted by Survey Order			
	Lab Values	N	%
Lab1	Normal lab value for BUN (blood, urea, nitrogen)	1581	76.90
Lab2	Normal lab value for arterial blood gases (pH <sub>1</sub> , PO <sub>2</sub> , PCO <sub>2</sub> , SaO <sub>2</sub> , HCO <sub>3</sub> )	1578	56.80
Lab3	Normal lab value for cholesterol (total)	1569	53.70
Lab4	Normal lab value for glucose	1584	95.40
Lab5	Normal lab value for hematocrit (Hct)	1583	88.10
Lab6	Normal lab value for hemoglobin (Hgb)	1581	90.10
Lab7	Normal lab value for hemoglobin A1C (HbA <sub>1</sub> C)	1574	60.70
Lab8	Normal lab value for platelets	1567	72.80
Lab9	Normal lab value for potassium (K <sup>+</sup> )	1582	91.80
Lab10	Normal lab value for red blood count (RBC)	1577	72.50
Lab11	Normal lab value for sodium (Na <sup>+</sup> )	1580	84.40
Lab12	Normal lab value for white blood count (WBC)	1583	90.50
Lab13	Normal lab value for albumin (blood)	1568	38.70
Lab14	Normal lab value for ALT (SGPT)	1572	28.80
Lab15	Normal lab value for ammonia	1575	31.50
Lab16	Normal lab value for AST (SGOT)	1571	28.60
Lab17	Normal lab value for bilirubin	1574	37.50
Lab18	Normal lab value for bleeding time	1577	69.10
Lab19	Normal lab value for cholesterol (HDL and LDL)	1571	51.00
Lab20	Normal lab value for creatinine	1574	67.00
Lab21	Normal lab value for digoxin	1571	72.30
Lab22	Normal lab value for ESR	1566	29.80
Lab23	Normal lab value for lithium	1574	37.20
Lab24	Normal lab value for magnesium	1571	41.20
Lab25	Normal lab value for PTT and APTT	1578	70.50
Lab26	Normal lab value for phosphorus/phosphate	1572	25.40
Lab27	Normal lab value for protein (total)	1566	33.50
Lab28	Normal lab value for prothrombin time (PT)	1575	78.30
Lab29	Normal lab value for urine (alb, pH, white blood cell count [WBC] and %T lymphocytes [differential])	1573	53.50
Lab30	Normal lab value for International Normalized Ratio (INR)	1578	75.50

## APPENDIX I: LABORATORY VALUES RANKED BY PERCENT ANSWERING YES

Preface: Is it important for the newly-licensed LPN/VN to memorize the following laboratory values?

**Table I. Laboratory Values Ranked by Percent Answering Yes**

	Lab Values	N	%
Lab26	Normal lab value for phosphorus/phosphate	1572	25.40
Lab16	Normal lab value for AST (SGOT)	1571	28.60
Lab14	Normal lab value for ALT (SGPT)	1572	28.80
Lab22	Normal lab value for ESR	1566	29.80
Lab15	Normal lab value for ammonia	1575	31.50
Lab27	Normal lab value for protein (total)	1566	33.50
Lab23	Normal lab value for lithium	1574	37.20
Lab17	Normal lab value for bilirubin	1574	37.50
Lab13	Normal lab value for albumin (blood)	1568	38.70
Lab24	Normal lab value for magnesium	1571	41.20
Lab19	Normal lab value for cholesterol (HDL and LDL)	1571	51.00
Lab29	Normal lab value for urine (alb, pH, white blood cell count [WBC] and %T lymphocytes [differential])	1573	53.50
Lab3	Normal lab value for cholesterol (total)	1569	53.70
Lab2	Normal lab value for arterial blood gases (pH <sub>1</sub> , PO <sub>2</sub> , PCO <sub>2</sub> , SaO <sub>2</sub> , HCO <sub>3</sub> )	1578	56.80
Lab7	Normal lab value for hemoglobin A1C (HbA <sub>1C</sub> )	1574	60.70
Lab20	Normal lab value for creatinine	1574	67.00
Lab18	Normal lab value for bleeding time	1577	69.10
Lab25	Normal lab value for PTT and APTT	1578	70.50
Lab21	Normal lab value for digoxin	1571	72.30
Lab10	Normal lab value for red blood count (RBC)	1577	72.50
Lab8	Normal lab value for platelets	1567	72.80
Lab30	Normal lab value for International Normalized Ratio (INR)	1578	75.50
Lab1	Normal lab value for BUN (blood, urea, nitrogen)	1581	76.90
Lab28	Normal lab value for prothrombin time (PT)	1575	78.30
Lab11	Normal lab value for sodium (Na <sup>+</sup> )	1580	84.40
Lab5	Normal lab value for hematocrit (Hct)	1583	88.10
Lab6	Normal lab value for hemoglobin (Hgb)	1581	90.10
Lab12	Normal lab value for white blood count (WBC)	1583	90.50
Lab9	Normal lab value for potassium (K <sup>+</sup> )	1582	91.80
Lab4	Normal lab value for glucose	1584	95.40

## APPENDIX N: KNOWLEDGE SURVEY NONRESPONDER STUDY

### Introduction

NCSBN conducted a knowledge statement survey to assess the knowledge newly-licensed nurses needed to possess for safe and effective professional practice. The purpose of the study was to inform NCLEX item development. The overall response rate for the 2009 LPN/VN Nursing Knowledge Survey was more than 26.0%. Of the 6,350 Newly Licensed LPN/VNs, LPN/VN Educators and LPN/VN Supervisors who were invited to take the survey, 1,595 completed and returned the survey. NCSBN made the decision to contact a sample of the nurses who did not respond to the survey, in order to determine if the results of the 2009 knowledge survey could be biased. If there was a systematic difference in the ratings of the knowledge statement between responders and nonresponders, then the results could potentially be biased. Ruling out the potential for systematic differences among raters supports the validity of the results. Additionally, NCSBN wanted to assess the reasons nonresponders did not return the survey, in order to increase response rates in future studies.

### Methodology

#### Sample Selection

A random sample of 30 Newly Licensed LPN/VNs, 30 LPN/VN Educators and 30 LPN/VN Supervisors who were invited, but did not respond to the 2009 LPN/VN Nursing Knowledge Survey, were contacted via telephone.

#### Telephone Interview Process

Nonresponders were contacted via telephone by a vendor, using telephone numbers provided by NCSBN. Nonresponders were first asked about their reasons for not completing the 2009 LPN/VN Nursing Knowledge Survey. To facilitate the gathering of data from nonresponders, NCSBN used prior research to develop a list of possible reasons why invitees may not have responded to the survey. These reasons included: too busy, did not care, do not like/trust surveys, did not receive it, and other. If the nonresponder answered other, they were asked to provide their own reason. Next, in order to

provide background information on nonresponders, individuals were asked for employment setting/specialty and length of time in their current position. In addition, responders were asked to rate 17 knowledge statements that were listed in the 2009 LPN/VN Nursing Knowledge Survey. Responders were thanked for their time and responses were recorded in a Microsoft Excel 2007 spreadsheet.

#### Return Rates

Of the nonresponders who were potential contacts, 90 individuals participated in the study: 30 Newly Licensed LPN/VNs, 30 LPN/VN Educators and 30 LPN/VN Supervisors.

### Nonresponder Results

#### Reasons for Not Responding

Reasons for not responding were as follows: 39 respondents (43.3%) did not receive the survey, 29 respondents (32.2%) were too busy, and 22 respondents (24.4%) listed other reasons. None of the participants indicated that they do not like/trust surveys or that they did not care as a reason for not returning the survey. See Figure N-1 for the results.

#### Time at Your Current Position

Responders were asked how many months they had been in their current position. Responders who were Newly Licensed LPN/VNs averaged 6.9 months at their job compared to nonresponders who were asked later in the survey process and averaged 11.6 months on the job. Nonresponder LPN/VN Educators actually had been in their current positions longer than responder LPN/VN Educators; 146.8 months (12.2 years) compared to 105.1 months (8.8 years). Nonresponder LPN/VN Supervisors spent an average of 87.5 months (7.3 years) at their job, less than half the average time (191.4 months or 16.0 years) for responder LPN/VN Supervisors job title. Figure N-2 presents the average months at position by job title.

**Figure N-1. Reasons For Not Responding**

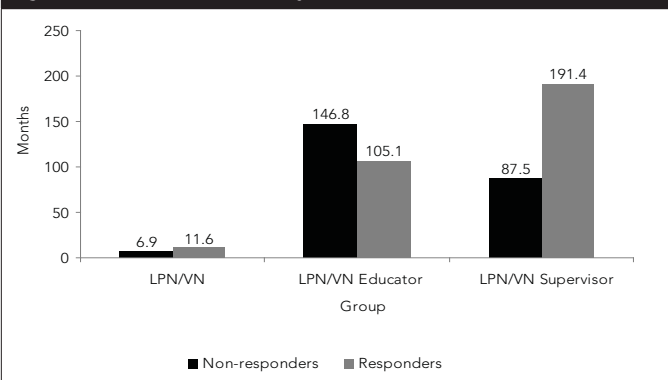

**Importance Ratings**

Importance ratings of the knowledge statements were provided by the nonresponders and compared to the average rating of the same knowledge statements by survey responders. Overall, nonresponders and responders had similar ratings of knowledge statements. Table N-3 contains the results of the comparison of average importance ratings for responders and nonresponders.

**Summary**

This study found that responders and nonresponders rated the importance of 17 knowledge statements quite similarly. These findings suggest that there are no systematic differences in ratings between the two groups that could bias the results of the study. This lends support to the validity of the findings from the 2009 LPN/VN Nursing Knowledge Survey. Additionally, the findings suggest that individuals did not complete the study because they were either too busy or did not receive the survey. Overall, these results provide important information on the validity of the 2009 LPN/VNs Nursing Knowledge Survey and why individuals do not complete surveys.

**Figure N-2. Months at Position by Job Title**

**Employment Setting/Specialty**

Nonresponders were asked to provide their employment setting/specialty area. Similar to responders, the largest percentage of Newly Licensed LPN/VN nonresponders listed their employment setting/specialty area as nursing home (40.0% for nonresponders and 46.9% for responders). Non-responder LPN/VN Educators overwhelmingly chose the other category and indicated their specialty was in education (76.7%), while responder LPN/VN Educators chose medical-surgical unit as their area of specialty (57.5%). The majority of nonresponder LPN/VN Supervisors chose home health as the most frequent employment setting (43.3%), while nursing home was the most popular setting for responders in this primary job title (50.8%).

Differences between nonresponder and responder results could potentially be due to the classification of setting by the vendor. See Tables N-1 and N-2 for responder and nonresponder employment setting information for each primary job title.

Table N-1. Employment Setting/Specialty for Responders and Nonresponders

## APPENDIX O: LINKING OF KNOWLEDGE STATEMENTS AND ACTIVITY STATEMENTS

\*Appendix O was developed by the SME panelists and does not reflect the final knowledge statement and categorization

Linking of Knowledge Statements and Activity Statements
<b>1. Coordinated Care</b>
<b>Use data from various sources in making clinical decisions</b>
sources of data (e.g., computer or client records)
data access
evidence-based practice
interdisciplinary team
safe hand-off/ reporting process
<b>Contribute to the development and/or update of the client plan of care</b>
interdisciplinary team
safe hand-off/ reporting process
client diagnoses/prognosis
client goals
psychosocial dynamics
care planning process
<b>Assign client care and/or related tasks (i.e., assistive personnel or LPN/LVN)</b>
scope of practice
rules of delegation/assignment
assistive personnel
safe hand-off/ reporting process
client condition
<b>Organize and prioritize care for assigned group of clients</b>
safe hand-off/ reporting process
client diagnoses/prognosis
level of acuity
coordination of care
<b>Recognize and report staff conflict</b>
chain of command
conflict resolution
communication techniques
<b>Advocate for client rights and needs</b>
facility resources
community resources
patient bill of rights
treatment options
cultural/religious beliefs or practices
<b>Promote client self-advocacy</b>
cultural/religious beliefs or practices
client education
client condition

<b>Linking of Knowledge Statements and Activity Statements</b>
<b>Participate in quality improvement (QI) activity (e.g., collecting data or serving on QI committee)</b>
documentation
error/occurrence reporting
data collection and analysis
chart review
<b>Involve client in care decision-making</b>
client education
treatment options
client condition
client goals
<b>Follow-up with client after discharge</b>
communication techniques
continuity of care
Participate in staff education
education opportunities
learning styles
evidence-based practice
scope of practice
<b>Participate in orientation of new employee</b>
scope of practice
learning styles
communication techniques
evaluation techniques
documentation
<b>Recognize task/assignment you are not prepared to perform and seek assistance</b>
scope of practice
chain of command
communication techniques
personal limitations
assistive resources (e.g., staff or equipment)
<b>Respond to the unsafe practice of a health care provider (e.g., intervene or report)</b>
scope of practice
chain of command
documentation
conflict resolution
communication techniques
licensing agency
evidence-based practice
<b>Participate in client discharge or transfer</b>
medication reconciliation
coordination of care
safe hand-off/ reporting process
community resources
client diagnoses/prognosis

<b>Linking of Knowledge Statements and Activity Statements</b>
client education
anticipated client goals/outcomes
admission process
<b>Receive and process health care provider orders</b>
documentation
accepted abbreviations
evidence-based practice
scope of practice
client medical history
procedure for processing orders (e.g., verbal, written or telephone)
<b>Follow regulation/policy for reporting specific issues (e.g., abuse, neglect, gunshot wound or communicable disease)</b>
reporting agencies
documentation
client rights
confidentiality
<b>Participate in client consent process</b>
confidentiality
client consent
client education
documentation
admission process
<b>Maintain client confidentiality</b>
confidentiality
HIPAA
patient bill of rights
<b>Provide for privacy needs</b>
confidentiality
HIPAA
patient bill of rights
cultural/religious beliefs or practices
personal privacy
<b>Provide information about advance directives</b>
community resources
advance directives
admission process
facility resources
client education
<b>Perform telephone triage</b>
evidence-based practice
disease processes
communication techniques
data collection and analysis
scope of practice
<b>Use information technology in client care</b>

<b>Linking of Knowledge Statements and Activity Statements</b>
sources of data (e.g., computer or client records)
data access
interdisciplinary team
confidentiality
HIPAA
patient bill of rights
<b>Apply evidence-based practice when providing care</b>
evidence-based practice
facility resources
community resources
client diagnoses/prognosis
education opportunities
<b>Participate as a member of an interdisciplinary team</b>
communication techniques
interdisciplinary process
safe hand-off/ reporting process
client diagnoses/prognosis
client goals
<b>Supervise/evaluate activities of assistive personnel</b>
scope of practice
chain of command
evaluation techniques
leadership and management skills
communication techniques
conflict resolution
<b>Organize activities in cost-effective manner</b>
fiscal responsibility
inventory control
<b>Participate in client referral process</b>
referral process
facility resources
community resources
disease processes
insurance requirements
<b>Give and receive report</b>
safe hand-off/ reporting process
communication techniques
documentation
client condition
client medical history
confidentiality
<b>2. Safety &amp; Infection Control</b>
<b>Assure availability and safe functioning of medical equipment</b>
reporting process for defective equipment

<b>Linking of Knowledge Statements and Activity Statements</b>
inventory evaluation
proper use and maintenance of equipment
equipment education (e.g., new or existing)
<b>Evaluate the appropriateness of order for client</b>
disease processes
client diagnoses/prognosis
client medical history
data collection and analysis
evidence-based practice
<b>Verify the identity of client</b>
client identifiers
confidentiality
client medical records
<b>Use proper body mechanics</b>
transfer/positioning equipment
body mechanics
personal limitations
client abilities
<b>Use standard/universal precautions</b>
infection control
client diagnoses/prognosis
supplies
<b>Identify client allergies and intervene as appropriate</b>
client medical history
data collection and analysis
signs and symptoms of allergic reaction
emergency procedures/equipment
<b>Participate in preparation for internal and external disasters (e.g., fire or natural disaster)</b>
continuing education
emergency procedures/equipment
<b>Identify and address hazardous conditions in care environment (e.g., chemical, smoking or biohazard)</b>
continuing education
emergency procedures/equipment
location of MSDS
storage location of hazardous material
disposal of hazardous material
hazardous conditions
personal protective equipment
<b>Implement least restrictive restraints or seclusion</b>
restraint (e.g., chemical or physical)
seclusion procedures
documentation
client medical history
facility resources

<b>Linking of Knowledge Statements and Activity Statements</b>
<b>Use aseptic and sterile techniques</b>
aseptic and sterile techniques
infection control
<b>Follow protocol for timed client monitoring (e.g., suicide precautions, restraint/seclusion or safety checks)</b>
documentation
restraint (e.g., chemical or physical)
seclusion procedures
emergency procedures/equipment
client medical history
<b>Assist in or reinforce education to client about safety precautions</b>
client education
disease processes
learning styles
documentation
cultural/religious beliefs or practices
client medical history
<b>Search client belongings when indicated</b>
admission process
patient bill of rights
confidentiality
documentation
safety concerns
<b>Identify the need for and implement appropriate isolation techniques</b>
isolation equipment/supplies
types of isolation
client diagnoses/prognosis
signs and symptoms of communicable disease
<b>Initiate and participate in security response (e.g., infant abduction or flight risk)</b>
emergency procedures/equipment
safety concerns
facility resources
<b>3. Health Promotion and Maintenance</b>
<b>Provide care and resources for beginning of life and/or end of life issues and choices</b>
community resources
client diagnoses/prognosis
cultural/religious beliefs or practices
treatment options
human growth and development
advance directives
facility resources
psychosocial dynamics
<b>Assist with fetal heart monitoring for the antepartum client</b>
fetal monitoring
scope of practice

<b>Linking of Knowledge Statements and Activity Statements</b>
client medical history
critical signs and symptoms
anatomy/physiology
<b>Provide care that meets the special needs of the newborn - less than 1 month old</b>
human growth and development
facility resources
community resources
client education
communication techniques
client rights
confidentiality
cultural/religious beliefs or practices
psychosocial dynamics
<b>Provide care that meets the special needs of infants or children aged 1 month to 12 years</b>
human growth and development
facility resources
community resources
client education
learning styles
communication techniques
client rights
confidentiality
cultural/religious beliefs or practices
psychosocial dynamics
<b>Provide care that meets the special needs of adolescents aged 13 to 18 years</b>
human growth and development
facility resources
community resources
client education
client rights
confidentiality
learning styles
communication techniques
cultural/religious beliefs or practices
psychosocial dynamics
<b>Provide care that meets the special needs of young adults aged 19 to 30 years</b>
human growth and development
facility resources
community resources
client education
learning styles
communication techniques
client rights
confidentiality

**Linking of Knowledge Statements and Activity Statements**

cultural/religious beliefs or practices

psychosocial dynamics

**Provide care that meets the special needs of adults aged 31 to 64 years**

human growth and development

facility resources

community resources

client education

learning styles

communication techniques

client rights

confidentiality

cultural/religious beliefs or practices

psychosocial dynamics

**Provide care that meets the special needs of clients aged 65 to 85 years of age**

data collection and analysis

critical signs and symptoms

<b>Linking of Knowledge Statements and Activity Statements</b>
<b>Monitor recovery of stable postpartum client</b>
human growth and development
scope of practice
documentation
cultural/religious beliefs or practices
client medical history
facility resources
community resources
data collection and analysis
critical signs and symptoms
<b>Compare client development to norms</b>
human growth and development
documentation
data collection and analysis
community resources
<b>Assist client with expected life transition (e.g., attachment to newborn, parenting or retirement)</b>
community resources
human growth and development
facility resources
client education
cultural/religious beliefs or practices
<b>Discuss sexual issues with client (e.g., family planning, menopause or erectile dysfunction)</b>
communication techniques
human growth and development
cultural/religious beliefs or practices
client education
facility resources
community resources
confidentiality
<b>Participate in health screening or health promotion programs</b>
communication techniques
human growth and development
cultural/religious beliefs or practices
client education
facility resources
community resources
<b>Provide information for prevention of high risk behaviors</b>
communication techniques
human growth and development
cultural/religious beliefs or practices
client education
facility resources
community resources
confidentiality

<b>Linking of Knowledge Statements and Activity Statements</b>
client rights
high risk behaviors
<b>Recognize barriers to communication or learning</b>
client education
learning styles
communication barriers (e.g., hearing or language)
cultural/religious beliefs or practices
communication techniques
<b>Collect data for health history</b>
client medical history
communication techniques
documentation
<b>Collect baseline physical data (e.g., skin integrity or height and weight)</b>
physical inspection and data collection
documentation
communication techniques
confidentiality
assessment equipment
cultural/religious beliefs or practices
<b>Identify and educate clients in need of immunizations (required and voluntary)</b>
human growth and development
immunization types and recommendations
cultural/religious beliefs or practices
client medical history
client education
learning styles
communication barriers (e.g., hearing or language)
documentation
communication techniques
<b>4. Psychosocial Integrity</b>
<b>Provide emotional support to client and family</b>
communication techniques
facility resources
community resources
cultural/religious beliefs or practices
confidentiality
psychosocial dynamics
<b>Collect data regarding client psychological and social status</b>
data collection and analysis
admission process
communication techniques
confidentiality
psychosocial dynamics
client condition

<b>Linking of Knowledge Statements and Activity Statements</b>
<b>Identify client use of effective and ineffective coping mechanisms</b>
communication techniques
coping mechanisms
cultural/religious beliefs or practices
documentation
data collection and analysis
psychosocial dynamics
<b>Promote client positive self-esteem</b>
communication techniques
coping mechanisms
cultural/religious beliefs or practices
client education
documentation
data collection and analysis
human growth and development
psychosocial dynamics
<b>Identify significant body or life-style changes and other stressors that may affect recovery/health maintenance</b>
communication techniques
coping mechanisms
cultural/religious beliefs or practices
documentation
data collection and analysis
human growth and development
facility resources
community resources
psychosocial dynamics
<b>Collect data on client potential for violence</b>
data collection and analysis
documentation
cultural/religious beliefs or practices
facility resources
community resources
admission process
coping mechanisms
safety concerns
emergency procedures/equipment
communication techniques
psychosocial dynamics
<b>Identify signs and symptoms of substance abuse/chemical dependency, withdrawal or toxicity</b>
admission process
data collection and analysis
critical signs and symptoms
emergency procedures/equipment
safety concerns

**Linking of Knowledge Statements and Activity Statements**

communication techniques
substance abuse
psychosocial dynamics
<b>Assist in or reinforce education to caregivers/family on ways to manage client with behavioral disorders</b>
facility resources
community resources
client education
communication techniques
human growth and development
documentation
psychosocial dynamics
<b>Participate in behavior management program by recognizing environmental stressors and/or providing therapeutic environment</b>
communication techniques
coping mechanisms
cultural/religious beliefs or practices
client education
documentation
data collection and analysis
psychosocial dynamics
<b>Explore why client is refusing or not following treatment plan</b>
communication techniques
coping mechanisms
cultural/religious beliefs or practices
documentation
data collection and analysis
facility resources
client diagnoses/prognosis
psychosocial dynamics
<b>Participate in client group session</b>
communication techniques
coping mechanisms
cultural/religious beliefs or practices
client education
documentation
data collection and analysis
facility resources
client diagnoses/prognosis
human growth and development
psychosocial dynamics
<b>Make adjustment to care with consideration of client spiritual or cultural beliefs</b>
cultural/religious beliefs or practices
facility resources
community resources
communication techniques

<b>Linking of Knowledge Statements and Activity Statements</b>
documentation
data collection and analysis
<b>Assist in managing the care of angry/agitated client</b>
communication techniques
coping mechanisms
emergency procedures/equipment
safety concerns
chain of command
conflict resolution
facility resources
community resources
client diagnoses/prognosis
psychosocial dynamics
<b>Participate in reminiscence therapy, validation therapy or reality orientation</b>
communication techniques
documentation
facility resources
client diagnoses/prognosis
client medical history
<b>Assist in the care of the cognitively impaired client</b>
communication techniques
documentation
facility resources
client diagnoses/prognosis
client medical history
safety concerns
learning styles
<b>Assist client to cope/adapt to stressful events and changes in health status (e.g., end-of-life, grief and loss, life changes or physical changes)</b>
communication techniques
documentation
facility resources
client diagnoses/prognosis
client medical history
safety concerns
learning styles
coping mechanisms
community resources
cultural/religious beliefs or practices
<b>Use therapeutic communication techniques with client</b>
communication techniques
learning styles
coping mechanisms
cultural/religious beliefs or practices

<b>Linking of Knowledge Statements and Activity Statements</b>
facility resources
client diagnoses/prognosis
<b>Provide support for clients with sexuality issues (e.g., gender identity)</b>
facility resources
community resources
safety concerns
coping mechanisms
cultural/religious beliefs or practices
communication techniques
psychosocial dynamics
<b>5. Basic Care and Comfort</b>
<b>Use transfer assistive devices (e.g., t-belt, slide board or mechanical lift)</b>
body mechanics
transfer/positioning equipment
personal limitations
client abilities
safety concerns
client diagnoses/prognosis
assistive resources (e.g., staff or equipment)
<b>Use alternative/complementary therapy (e.g., acupressure, music therapy or herbal therapy) in providing client care</b>
alternative/complementary therapy
cultural/religious beliefs or practices
client education
facility resources
documentation
data collection and analysis
client medical history
<b>Provide for mobility needs (e.g., ambulation, range of motion, transfer to chair, repositioning or the use of adaptive equipment)</b>
body mechanics
transfer/positioning equipment
personal limitations
client abilities
safety concerns
client diagnoses/prognosis
assistive resources (e.g., staff or equipment)
client education
documentation
<b>Provide feeding and/or care for client with enteral tubes</b>
enteral tubes
safety concerns
client diagnoses/prognosis
emergency procedures/equipment
client positioning
client education

<b>Linking of Knowledge Statements and Activity Statements</b>
nutrition
feeding equipment/pumps
documentation
anatomy/physiology
vital signs
assistive resources (e.g., staff or equipment)
<b>Monitor and provide for nutritional needs of client (e.g., labs, calorie counts/percentages or daily weight)</b>
intake/output
nutrition
lab values
weight
human growth and development
documentation
client education
communication techniques
client diagnoses/prognosis
client medical history
cultural/religious beliefs or practices
data collection and analysis
<b>Provide non-pharmacological measures for pain relief (e.g., imagery, massage or repositioning)</b>
alternative/complementary therapy
client education
documentation
communication techniques
coping mechanisms
cultural/religious beliefs or practices
data collection and analysis
pain scales
facility resources
human growth and development
<b>Assist with activities of daily living</b>
coping mechanisms
cultural/religious beliefs or practices
data collection and analysis
client diagnoses/prognosis
client education
documentation
client abilities
assistive personnel
human growth and development
<b>Institute bowel or bladder management to improve client elimination</b>
client education
human growth and development
client medical history

**Linking of Knowledge Statements and Activity Statements**

retraining program

<b>Linking of Knowledge Statements and Activity Statements</b>
client medical history
communication techniques
signs and symptoms of allergic reaction
pharmacology
<b>Reinforce education to client regarding medications</b>
client education
pharmacology
learning styles
communication techniques
documentation
<b>Maintain medication safety practices (e.g., storage, checking for expiration dates or compatibility)</b>
rights of medication administration
pharmacology
drug interactions
safety concerns
emergency procedures/equipment
documentation
facility policy
<b>Perform calculations needed for medication administration</b>
pharmacology
drug calculations
<b>7. Reduction of Risk Potential</b>
<b>Perform risk monitoring (e.g., sensory impairment, potential for falls or level of mobility)</b>
client medical history
client diagnoses/prognosis
human growth and development
pharmacology
environment
restraint (e.g., chemical or physical)
skin integrity
client positioning
<b>Provide appropriate follow-up after incident (e.g., fall, client elopement or medication error)</b>
communication techniques
client compliance
continuity of care
documentation
chain of command
vital signs
emergency procedures/equipment
<b>Perform bladder scan</b>
proper use and maintenance of equipment
client medical history
documentation
anatomy/physiology

<b>Linking of Knowledge Statements and Activity Statements</b>
communication techniques
<b>Insert urinary catheter</b>
proper use and maintenance of equipment
client medical history
documentation
anatomy/physiology
communication techniques
client positioning
aseptic and sterile techniques
<b>Collect specimen (e.g., urine, stool, gastric contents or sputum for diagnostic testing)</b>
infection control
documentation
client education
specimen collection procedure
<b>Monitor continuous or intermittent suction of naso-gastric (NG) tube</b>
infection control
documentation
proper use and maintenance of equipment
intake/output
<b>Monitor diagnostic or laboratory test results</b>
lab values
documentation
facility resources
client diagnoses/prognosis
client medical history
<b>Insert naso-gastric (NG) tube</b>
proper use and maintenance of equipment
client medical history
documentation
anatomy/physiology
client education
communication techniques
aseptic and sterile techniques
scope of practice
naso-gastric (NG) procedure
<b>Identify signs or symptoms of potential prenatal complications</b>
critical signs and symptoms
client medical history
human growth and development
safety concerns
cultural/religious beliefs or practices
documentation
<b>Take client vital signs</b>
vital signs

documentation
proper use and maintenance of equipment
communication techniques
<b>Implement measures to manage/prevent complication of client condition or procedure (e.g., circulatory complication, seizure, aspiration or potential neurological disorder)</b>
communication techniques
client education
continuity of care
documentation
chain of command
vital signs
emergency procedures/equipment
critical signs and symptoms
data collection and analysis
safety concerns
<b>Provide intra-operative care (e.g., positioning client for surgery, maintaining sterile field or providing operative observation)</b>
client diagnoses/prognosis
client positioning
aseptic and sterile techniques
infection control
data collection and analysis
scope of practice
vital signs
emergency procedures/equipment
<b>Evaluate client respiratory status (e.g., breath sounds, rate or measuring oxygen (O2) saturation)</b>
proper use and maintenance of equipment
client medical history
documentation
anatomy/physiology

<b>Linking of Knowledge Statements and Activity Statements</b>
communication techniques
emergency procedures/equipment
lab values
<b>Perform an electrocardiogram (EKG/ECG)</b>
anatomy/physiology
client medical history
client diagnoses/prognosis
documentation
proper use and maintenance of equipment
communication techniques
<b>Assist with the performance of an invasive procedure by setting up sterile field and equipment or providing other assistance</b>
client diagnoses/prognosis
client positioning
aseptic and sterile techniques
infection control
scope of practice
vital signs
<b>Perform venipuncture for blood draws</b>
skin integrity
documentation
scope of practice
proper use and maintenance of equipment
anatomy/physiology
human growth and development
client medical history
aseptic and sterile techniques
communication techniques
specimen collection procedure
standard/universal precautions
safety concerns
<b>Administer and check proper use of compression stockings/sequential compression devices (SCD)</b>
proper use and maintenance of equipment
anatomy/physiology
documentation
skin integrity
client education
<b>8. Physiological Adaptation</b>
<b>Reinforce education to client regarding care and condition</b>
communication techniques
documentation
disease processes
client abilities
learning styles
facility resources

**Linking of Knowledge Statements and Activity Statements**

community resources

**Provide care for client drainage device (e.g., wound drain or chest tube)**

infection control

anatomy/physiology

documentation

skin integrity

data collection and analysis

client education

emergency procedures/equipment

communication techniques

**Remove client wound drainage device**

infection control

anatomy/physiology

documentation

skin integrity

data collection and analysis

client education

emergency procedures/equipment

communication techniques

biohazardous waste

scope of practice

client identifiers

**Identify/intervene to control signs of hypoglycemia or hyperglycemia**

documentation

data collection and analysis

emergency procedures/equipment

lab values

client medical history

pharmacology

client education

scope of practice

facility resources

**Provide cooling/warming measures to restore normal temperature**

client diagnoses/prognosis

emergency procedures/equipment

documentation

data collection and analysis

client medical history

**Perform wound care and/or dressing change**

assistive resources (e.g., staff or equipment)

aseptic and sterile techniques

infection control

biohazardous waste

skin integrity

Linking of Knowledge Statements and Activity Statements
wound care
anatomy/physiology
client identifiers
documentation
<b>Respond to a life-threatening situation</b>
emergency procedures/equipment
documentation
data collection and analysis
client medical history
communication techniques
facility resources
advance directives
<b>Intervene to improve client respiratory status (e.g., breathing treatment, suctioning or repositioning)</b>
facility resources
client medical history
anatomy/physiology
client positioning
proper use and maintenance of equipment
emergency procedures/equipment
client education
documentation
data collection and analysis
aseptic and sterile techniques
<b>Provide care for a client with a tracheostomy</b>
facility resources
client medical history
anatomy/physiology
client positioning
proper use and maintenance of equipment
emergency procedures/equipment
client education
documentation
data collection and analysis
aseptic and sterile techniques
infection control
skin integrity
scope of practice
<b>Identify and treat a client intravenous (IV) line infiltration</b>
signs and symptoms of intravenous (IV) line infiltration
treatment options
documentation
skin integrity
infection control
removal procedures (e.g., peripheral intravenous (IV) line, naso-gastric (NG) tube or urinary catheter)

**Linking of Knowledge Statements and Activity Statements****Remove wound sutures or staples**

documentation

skin integrity

infection control

removal procedures (e.g., peripheral intravenous (IV) line, naso-gastric (NG) tube or urinary catheter)

supplies

aseptic and sterile techniques

**Provide care to client on ventilator**

facility resources

client medical history

anatomy/physiology

client positioning

proper use and maintenance of equipment

emergency procedures/equipment

client education

documentation

data collection and analysis

aseptic and sterile techniques

infection control

skin integrity

scope of practice

**Perform check of client pacemaker**

scope of practice

anatomy/physiology

documentation

data collection and analysis

proper use and maintenance of equipment

**Perform care for client before or after diagnostic/surgical procedure**

data collection and analysis

documentation

client medical history

client education

safety concerns

client identifiers

client diagnoses/prognosis

vital signs

pain management

communication techniques

**Identify abnormalities on a client cardiac monitor strip**

data collection and analysis

client medical history

basic cardiac rhythms

scope of practice

**Identify signs and symptoms of an infection**

**Linking of Knowledge Statements and Activity Statements**

vital signs

data collection and analysis

documentation

skin integrity

infection control

client medical history

lab values

**Provide care to client with an ostomy (e.g., colostomy, ileostomy or urostomy)**

skin integrity

supplies

data collection and analysis

documentation

client education

communication techniques

wound care
