EXECUTIVE SUMMARY

Background of Study

The National Council of State Boards of Nursing (NCSBN) is responsible for assisting its members, the boards of nursing in the United States and its territories, in the mission of public protection through safe nursing practice. Care provided by nurse aides or nursing assistants (defined for this study as individuals, regardless of title, who assist with the delivery of direct nursing care to clients/patients/residents) directly impacts client safety and influences the quality of care provided by licensed nurses. As nursing practice changes, activities performed by nurse aides or assistants (NAs) may change. Job analyses provide a means of identifying these changes.

Methodology

A nonexperimental, descriptive study was performed to explore the activities performed by assistive personnel, the amount of experience necessary to complete such activities and the priority of such activities in the provision of safe client care. A panel of 17 nurses and NAs was assembled to assist with the practical analysis. All panel members supervised or performed the work of nursing assistive personnel. The panel created a list of 119 activities that NAs perform. The panel also developed two questionnaires for this study: the Nurse Aide Nursing Activity Study and the Nurse Aide Evaluator Activity Study. The Nurse Aide Nursing Activity Study asked NAs about the frequency with which they performed the listed activities while on the job. The Nurse Aide Evaluator Activity Study asked the nursing staff who evaluates or supervises nursing assistants (NAEs) to provide information about the priority of the activity and the amount of experience that the NA needs to perform the activity with minimal supervision by the NAE.

Survey Process

The methodologies used in this study were: (1) a four-stage mailing to nursing administrators of nursing homes, home health agencies and hospitals and (2) a four-stage direct mailing to NAs certified within the last year. A 23.6% response rate was obtained from the facilities and 27.9% response rate from NAs. This job analysis contains the responses of 1.702 NAs and 599 NAEs.

Characteristics of Respondent Facilities

Respondent facilities included nursing homes, home health agencies and hospitals. The responding facilities were approximately representative of the population of agencies from which the sample was drawn based on multiple characteristics including type of ownership, type of agency control, numbers of beds and numbers of nursing employees.

Demographics of Respondents

The majority (93.8%) of NAs responding to the Job Analysis Survey were female averaging 39 years of age. Most of the NAs prepared for the current work with previous experience and courses from their current or past employers. Most of the NAs who earned certification had earned a CNA. About 5% were enrolled in RN programs, 2.9% were enrolled in LPN/VN programs and 8.3% had applied to nursing education programs but were not currently enrolled. Inability to afford tuition and noncompletion of prerequisite courses were the most commonly cited reasons for nonenrollment. About 90% of the NAEs reported holding nursing licenses: 71.8% RN and 18.5% LPN/VN. Most NAEs reported having been employed in current positions an average of 7.9 years and having held positions requiring that they evaluate work performed by NAs for an average of 13 years.

Work Settings

The majority of NAs and NAE respondents were employed in medical/surgical or rehabilitation units of hospitals, skilled care units of nursing homes or home health care in the client's residence. They mostly cared for older clients with stable or unstable chronic conditions, acutely ill clients, clients at the end of life or clients with behavioral/emotional conditions. Most worked the day shift and 36 or more hours/week.

Activity Performance Findings

The NA respondents rated the daily frequency of their performance of the 119 activity statements on the survey. The frequency with which NAs performed the activities was consistent across settings. The NAEs rated the experience needed by NAs to perform activities and priority of the activities. The experience and priority ratings were comparable across nursing home, home health agency and hospital settings.

Conclusions

NA work is essentially the same in nursing homes, home health agencies and hospitals

NAs with less than one year of experience perform the same types of activities at approximately the same frequencies as those with more experience. Report of Findings from the

2005 JOB ANALYSIS OF NURSE AIDES

Employed in Nursing Homes, Home Health Agencies and Hospitals

BACKGROUND OF STUDY

The National Council of State Boards of Nursing (NCSBN) is responsible for assisting its members, the boards of nursing in the United States and five territories, in their mission of public protection through safe nursing practice. Care provided by nurse aides or nursing assistants (defined for this study as individuals, regardless of title, who assist with the delivery of direct nursing care to clients/patients/residents) directly impacts client safety and influences the quality of care provided by licensed nurses. As nursing practice changes, the activities performed by those individuals assisting nurses may change. Periodic job analyses provide a means of identifying the nursing care activities delegated to and performed by nurse aides or nursing assistants.

This analysis of the work performed by nurse aides (NAs) in nursing homes, home health agencies and hospitals is the latest in a series of NA job analyses performed by NCSBN. Results of NA job analyses may be used by boards of nursing as they regulate the practice of assistive personnel or the nurses overseeing them, by educational programs as they plan curricula for nurses and their assistants, and by entities involved in the assessment of NA competencies.

METHODOLOGY

A nonexperimental, descriptive study was performed to explore the activities performed by assistive personnel, the amount of experience necessary to complete such activities and the priority of such activities in the provision of safe client care. This section describes the work performed by the study's panel of experts, the development of the survey questionnaire and the steps necessary for completion of the study.

Panel of Subject Matter Experts

A panel of 17 nurses and NAs was assembled to assist with the job analysis. All panel members supervised or personally performed the work of nursing assistive personnel. Panel members represented all geographic areas of the country, all major nursing specialties and all major practice settings (see Appendix A).

To assist in developing a list of NA activities, the panel of experts used past NA survey activity statements and employment documents such as job descriptions, performance evaluations, orientation documents and competency checklists. Additionally, panel members recruited 78 NAs in various practice settings and obtained from them daily logs of activities performed on the job. Finally, the panel of experts drew on their own intimate knowledge of NA work to create a list of 119 activities performed by nursing assistants in the practice setting. This activity list was created within the framework of the National Nurse Aide Assessment Program (NNAAP™) Test Plan (see Appendix B). Care was taken to develop the activities with approximately the same level of specificity and to avoid redundancy within and across categories. A list of activity statements included in the 2005 Nurse Aide Job Analysis can be found in Appendix D.

Questionnaire Development

An adequate assessment of NA work should include information detailing the frequency of activity performance of the importance or priority of each activity in relation to client safety and well-being (The Joint Standards for Education and Psychological Testing, AERA, APA, NCME, 1999). In addition, the amount

of experience needed to perform each activity with a minimum of supervision is useful information for those educating NAs. Data related to the frequency with which activities are performed may best be collected from practicing NAs performing the activities, while determinations on the priority of activity performance and the amount of experience needed may best be collected from nurses who supervise and evaluate the work performed by the NAs – the Nurse Aide Evaluator (NAE).

Thus, two surveys were developed for the 2005 Nurse Aide Job Analysis Study: the Nurse Aide Nursing Activity Study and the Nurse Aide Evaluator Nursing Activity Study (see Appendix G.1 & G.2). The Nurse Aide Nursing Activity Study contained six sections, the first of which asked questions about the NA's work environment including setting, hours worked and types and numbers of clients for whom care was provided. The 119 NA activities appeared in section two, while section three covered the time spent performing seven sets of nursing activities. Questions related to educational preparation and certifications achieved were found in the fourth section and demographics in the fifth section. The sixth and final section allowed the writing of comments and suggestions.

The Nurse Aide Evaluator Nursing Activity Study contained three sections. The first contained information about the NAE including the type of license held, position title, length of time in position, work setting, experience with evaluating NAs and types of clients for whom care was provided. The second section contained 119 NA activities (arranged in the same order used for the NA survey) and asked the NAE to provide information about two aspects

of each activity: the experience needed by the NA to perform the activity and the priority of the activity in relation to safe client care. The last section allowed the writing of comments and suggestions.

Methodology Experts

A panel of five external methodology reviewers was selected, based on expertise related to practice (job) analysis studies and/or use of such studies in the development of national credentialing/licensure examinations (see Appendix C). All five reviewers indicated that the proposed procedures for this job analysis were acceptable and approved the methodology prior to the study.

SURVEY PROCESS

Two survey methodologies were used in this study: (1) direct mailing to nursing administrators of nursing homes, home health agencies and hospitals, and (2) direct mailing to NAs certified within the last year. The nursing administrators were asked to distribute survey packets (a survey packet contained a survey with cover letter and return envelope) to two NAs and one NAE within their facilities. The direct mailing to newly certified NAs included a single survey packet. The two methodologies were necessary to overcome two data collection constraints. Based on the availability of mailing addresses, the direct mailing to NAs included mailing addresses from only 24 states, while the names and addresses of agencies employing NAs were available for all states. In order to make the job analysis practical for the evaluation of NA certifying tests, a proportion of the NA respondents needed to have entry-level experience (one year or less). Past studies have shown that small numbers of entry-level NAs respond from agency mailings. The sample of NAs drawn from the list of those registered or certified within the last year, while not encompassing the entire country, provided a set of responses that could be compared to those provided by more experienced NAs for detection of possible differences in practice. Thus, collection of data from NAs and nurses working in agencies provided data from all parts of the country, and the collection of data from NAs registered or certified in the last year provided enhanced information about entry-level practice.

Sample Selection

Agencies potentially employing NAs were identified from three sources. A list of hospitals was generated from Healthcare QuickDisc, a software product available from the American Hospital Association that provided names, addresses and other pertinent data from hospitals all over the country. A list of nursing homes located throughout the United States was obtained from the Medicare Web site. Contact information for home health agencies located across the United States was obtained from the Centers for Medicare and Medicaid Services Public Use Files - Providers of Service File.

For the direct mailing to nursing administrators, random samples of 1,500 hospitals, 1,500 nursing homes and 1,500 home health agencies were selected for use in the study. A package containing three survey packets (two NA and one NAE) and a cover letter was sent to the nurse administrator of each facility. The cover letter requested the nurse administrator to distribute the survey packets to two NAs and one nurse who evaluated the work of NAs. The NAE survey packet contained a cover letter to the NAE, a nurse evaluator survey and a return envelope. Each NA survey packet contained a cover letter to the NA, an NA survey and a return envelope.

For the direct mailing to NAs, a random sample of 2,000 NAs certified within the past year was generated from lists supplied by Promissor, the test vendor for National Nurse Aide Assessment Program (NNAAP™). These NAs were also sent survey packets containing a cover letter to the NA, an NA survey and a return envelope.

Representativeness

The sampled facilities were proportionally equivalent to the populations from which they were drawn in terms of type of ownership, type of control, numbers of beds and numbers of nursing staff (see Tables 1 through 3).

Mailing Procedure

A four-stage, first-class mailing process was used to engage participants in the study. A preletter explaining the study and announcing the future arrival of the questionnaire was mailed first. A questionnaire and cover letter with a return, postage paid envelope

was sent approximately one week after the preletter to the NA sample. Facilities received a packet containing two NA surveys and one NAE survey, all with return envelopes and a postcard reminder was sent to facilities in the sample approximately one week after the survey mailing. Two weeks after mailing the first postcard, a second reminder postcard was mailed. Survey packets were mailed to nonrespondents upon request.

Confidentiality

All potential participants were assured confidentiality with regard to their participation and their responses. Preassigned code numbers were used to facilitate cost-effective follow-up mailings. Files containing mailing information were kept separate from the data files. The study protocol was reviewed and approved by NCSBN's executive director for compliance with organizational guidelines for research studies involving human subjects.

Return Rates

Mailings that were sent to facilities and returned due to incorrect addresses totaled 883. Surveys were completed by one or more employees from 855 facilities (320 nursing homes, 233 home health agencies and 302 hospitals), resulting in a facility return rate of 23.6%. Of the mailings sent to NAs, 91 were returned due to incorrect addresses and 533 were completed, resulting in a NA registry return rate of 27.9%.

Summary

A panel of experts met and created a list of NA activities. Data collection instruments were created and sent to 2,000 NAs certified for one year or less and 4,500 agencies providing health care services and potentially employing NAs. A 23.6% response rate of analyzable surveys was obtained from agencies, and a 27.9% response rate was obtained from registry NAs. This job analysis contains the responses of 1,702 NAs and 599 NAEs.

CHARACTERISTICS OF RESPONDENT FACILITIES

Specific descriptive data about the individual nursing homes, home health agencies and hospitals in the population were available within the databases used for the study. Described in this section are the characteristics of respondent facilities and comparisons of facilities to proportions of characteristics within the populations from which they were drawn.

Nursing Homes

The majority of participating nursing homes were owned by for-profit corporations (51.3%) or nonprofit corporations (24.7%), while 50.6% were part of a multiple ownership group and 10.3% were located within hospitals. Most had 51–100 beds (37.8%) or 101–150 beds (26.3%). Most of the responding nursing homes employed 10 or fewer RN (74.1%) or LPN/VN (61.3%) full-time employees (FTEs). Nursing homes employed larger numbers of NAs: 20.9% employed 21–30 NAs, 17.8% employed 31 to 40 NAs, and 30.3% employed 40 or more NAs.

Respondent nursing homes were comparable to the entire population of nursing homes with regard to all measured characteristics (see Table 1).

Home Health Agencies

Most respondent home health agencies were either hospital-based programs (41.2%) or official health agencies (15.0%), or fell within the "other" category of facility type (31.8%). Of the agencies responding to the study, approximately 12% more were hospital-based than were those in the population of home health agencies, and about 18% fewer were in the "other" category (see Table 2). Most of the respondent home health agencies were controlled proprietarily (24.5%) or of nonprofit private control (27.9%). These figures were higher (9%) than those of the population for nonprofit control and about 24% below population figures for proprietary control (see Table 2).

Most (87.1%) of the respondent home health agencies were not accredited, 15.9% included a hospice care program and 52.8% provided NA competency evaluation. About 69.6% of the respondent agencies

employed 10 or fewer RN FTEs, 94.8% employed five or fewer LPN/VN FTEs, and 79.0% employed 10 or fewer home health aide FTEs. These figures were all similar to those of the home health agency population (see Table 2).

Hospitals

Respondent hospitals had similar characteristics to hospitals in the population: most (86.1%) provided general medical surgical services, 43.7% were under "other nonprofit" control, 69.5% were accredited by the Joint Commission on the Accreditation of Health Organizations (JCAHO) and 87.1% were comprised of fewer than 300 beds. Approximately 56% of respondent hospitals employed 100 or fewer RN full time employees (FTEs), and 81.8% employed 50 or fewer LPN/VN FTEs (see Table 3).

Summary

Respondent facilities were approximately representative of the populations of agencies from which samples were drawn, based on multiple characteristics including type of ownership, type of agency control, numbers of beds and numbers of nursing employees.

DEMOGRAPHICS OF RESPONDENTS

Demographic information about NA respondents is presented next, including age, gender, racial/ethnic backgrounds, preparation for NA work, experience and enrollment in nursing education programs, followed by descriptions of the education and experience of respondent NAEs.

Nurse Aides (NAs)

Age and Gender

The majority of respondent NAs reported being female (93.8%). The percentages of female NAs were approximately equal among the three types of employment settings. Overall, the average age of respondent NAs was 38.8 years (SD 11.5 years). Average ages indicate that NAs working in home health agencies (average 41.1 years; SD 10.9) and hospitals (average 38.9 years; SD 11.4) were only slightly older than those working in nursing homes, for which the average age was 37.9 years (SD 11.2).

Ethnicity

The majority of NA respondents reported being White (62.1%), 23.0% of African American descent, 8.2% of Latino or Hispanic descent and 2.4% of Asian descent. See Table 4 for a listing of respondent ethnic backgrounds.

Preparation for NA Work

The NAs from all employment settings reported approximately eight years of experience in the NA role. Of the respondent NAs, 8.4% had less than one year of total experience, 29.2% had one to five years of experience and 62.5% had more than five years of experience. These numbers were approximately equal across employment settings in the study.

Overall, NAs were most likely to cite previous work experience (51.5%) as their form of preparation for their current work as NAs. They also reported being prepared through courses offered by their current employer (27.8%), courses offered by previous employers (26.7%) and courses offered by technical or vocational schools (26.4%). See Table 5 for a listing of NA preparation for current work.

NAs were asked if any areas of knowledge/skill beyond basic NA practice were included in the courses or classes they had attended. Special care required by geriatric clients (63.8%) was the most frequently cited extra area of knowledge/skill, followed by emergency care procedures other than basic life support (38.5%) and blood glucose (fingerstick) testing (28.4%). The setting in which the NA worked often related to the type of knowledge/skills achieved. Aides working in home health agencies

> were more likely than those in hospitals or nursing homes to have had classes on administration of oral and/or topical medications. Those working in home health agencies and hospitals were more likely than those in nursing homes to have instruction had emergency care procedures other than basic

Course or training while in military service	0.6	0.9	0.7	0.7					
None	1.0	0.3	1.0	1.1					
Other	6.0	7.4	6.9	6.7					

^{*}Respondents could select more than one type of preparation

care for infants and children. See Table 6 for a listing of additional skills included in courses or classes taken by NAs.

When asked about certifications earned, the NAs were most likely (88.2%) to report having earned a certified nurse aide/assistant (CNA). Overall, only 10.4% had earned a certification in medication administration (CMT or CMT including insulin administration). See Table 7 for the list of certifications earned.

Enrollment in Nursing Programs

About 8.0% of the NA respondents reported current enrollment in nursing education programs, with 2.9% enrolled in LPN/VN programs and 5.1% enrolled in RN programs (most (3.5%) in associate degree programs). Approximately 8.3% reported that they had applied to but were not currently enrolled in a nursing education program. The most frequently cited reasons for nonenrollment included inability to afford tuition and noncompletion of prerequisite courses. See Table 8 for a complete listing of NA enrollment results (note that some respondents work in more than one setting).

Nurse Aide Evaluators (NAEs)

NAF Education

Of the 599 NAEs responding to the survey, 235 were employed in nursing homes, 172 were employed in home health agencies and 339 were employed in hospitals (setting overlap was common as respondents were asked to select all that applied). About 90% of the NAEs reported holding nursing licenses: 71.8% RN and 18.5% LPN/VN. Most respondent NAEs held associate (36.5%) or baccalaureate (21.4%) degrees in nursing or had LPN/VN (15.3%) education (see Table 9). LPN/VN educated NAEs responded most from nursing home settings (31.5% nursing home, 14.8% hospital and 3.6% home health), while respondents from hospitals and home health agencies were more likely to have associate (38.9% hospital, 37.3% home health and 29.7% nursing homes) or baccalaureate nursing degrees (21.6% hospital, 26.6% home health and 11.7% nursing homes).

NAE Experience

The NAE respondents reported having been employed in their current positions an average of 7.9 years (SD 6.97) and having held positions requiring that they evaluate the work performed by NAs for an average of 13 years (SD 9.12).

Summary

The majority of NAs responding to the 2005 NA Job Analysis Survey were female averaging 39 years of age. Most of the NAs prepared for their current work with previous experience and courses from their current or past employers. Most of the NAs who had earned certification had earned a CNA. About 5% of NA respondents were enrolled in RN programs and 2.9% were enrolled in LPN/VN programs. An additional 8.3% of NA respondents had applied to a nursing education program but were not currently enrolled. Inability to afford tuition and noncompletion of prerequisite courses were the most commonly cited reasons for nonenrollment. The NAEs responding to the survey reported working an average of 13 years as a NA within their practice setting.

WORK SETTINGS

Nurse Aide and Nurse Aide Evaluator Employment Settings

While both NA and NAE respondents reported working in a wide variety of employment settings, the hospital settings reported with the highest frequencies were extended care or rehabilitation units (NA 23.2%, NAE 19%) and medical/surgical units (NA 20.7%, NAE 31.2%). Skilled care was the most commonly reported nursing home employment setting (NA 34.1%, NAE 31.4%), and home health care in the client's residence (NA 28.9%, NAE 25.5%) was the most commonly selected home health care setting (see Table 10).

The majority of NAE respondents reported working in nursing homes and hospitals of fewer than 300 beds (70.9%). The greatest percentages of both NA and NAE respondents reported working in rural areas (NA 44.8%, NAE 54.1%) with 21% of NAs and 20.7% of NAEs working in urban/metropolitan areas, and 21.7% of NAS and 23.6% of NAEs working in suburban areas (see Table 11).

NA and NAE Titles

The NA respondents were asked to select a job title which most closely matched their current job title. NAEs were asked to select from the same list of 13 titles all titles used for assistive personnel in their employment settings (see Table 12). Certified nurse assistant/aide was the most commonly selected title by NAs (54.4%) and NAEs (71.0%), while nurse aide/assistant (NA 24.1%, NAE 25.5%) was the second most commonly selected.

The titles of the NAEs responding to the survey varied markedly by employment setting. NAEs employed in nursing homes were more likely to hold the title of charge nurse (27.9%) or director/assistant director (20.1%), while those in home health agencies were most likely to hold the title of director/assistant director (26.9%), supervisor (18.6%) or other (18.6%). NAEs employed in hos-

pitals were most likely to hold the title of charge nurse (24.7%) or staff RN (19.1%) (see Table 13).

Shifts Worked

The majority of NA (64.9%) and NAE (86.8%) respondents reported working day shifts, while about 25.4% of NAs and 9.3% of NAEs reported working evenings or nights (see Table 14). Approximately 75% of the NA respondents reported working 36 or more hours per week.

Client Ages

NAs were asked to indicate all of the age groups and types of clients that they cared for in their roles as NAs, and NAEs were asked to indicate the age groups and types of clients cared for by NAs in their employing facilities. The resulting data was similar for both groups of respondents. Both indicated that NAs were most likely to care for clients aged 65 to 85 years (NA 78.7%, NAE 89.8%), clients over the age of 85 (NA 39.4%, NAE 53.9%) and clients aged 31 to 64 years (NA 30.8%, NAE 40.7%) (see Table 15).

Client Types

NAs were asked to identify the types of clients they cared for and NAEs were asked to record the types of clients cared for by NAs in their employing facilities. NAs reported that the types of clients they cared for most often was clients with acute conditioned (NA 50.5%, NAE 63.1%), clients at end of life (NA 38.2%, NAE 62.8%), clients with stabilized chronic disorders (NA 46.1%, NAE 65.6%), clients with unstabilized chronic disorders (NA 25.7%, NAE 58.6%) and clients with behavioral/emotional conditions (NA 38.3%, NAE 47.2%) (see Table 16).

NAs and NAEs were asked the number of clients typically assigned to NAs at a given time. The NAEs reported that NAs in nursing homes cared for an average of 13 clients, the NAs in home health agencies cared for approximately 8 clients and NAs in hospitals cared for approximately 10 clients. The

NAs in nursing homes reported being assigned to 13 clients at a given time, those in home health agencies, 9 clients and those in hospitals, 12 clients.

Summary

The majority of NAs and NAEs responding to the 2005 NA Job Analysis Study were employed in medical/surgical or rehabilitation units of hospitals, skilled care units of nursing homes or home health care in the client's residence. They were most likely to care for older clients with stable or unstable chronic conditions, acutely ill clients and clients at the end of life or clients with behavioral/emotional conditions. Most respondents worked the day shift and NAs worked 36 or more hours per week. NAs in different settings were assigned to care for different numbers of clients.

ACTIVITY PERFORMANCE FINDINGS

Findings relative to the activities performed by NAs are presented in this section of the report. The methods used to collect and analyze activity statement findings relative to the frequency of NA activity performance, the amount of experience necessary for activity performance and the priority of the activities will be discussed. A validation of survey findings provided by the subject matter expert panel will also be provided.

Overview of Methods

The 2005 NA Job Analysis Survey asked NA respondents to rate the daily frequency of their performance of the 119 activity statements on the survey. Those ratings were provided on a five-point scale: 0 = zero times, 1 =one or two times, 2 =three to five times, 3 = six to nine times, 4 = ten times or more. NAE respondents were asked to provide two ratings for each activity performed. First they were asked to rate the amount of experience required for an NA to perform each activity with a minimum of direct supervision. Those ratings were provided on a fivepoint scale: 1 = less than one month experience, 2 = one to six months of experience, 3 = more than six months of experience, 4 = specialized practice for which NAs need additional training before performing this activity and 5 = NAs are not allowed to perform this activity. The NAEs were then asked to provide a priority rating for each activity performed according to the how important the activity is to providing save client care. Priority ratings were provided on a 4-point scale with 1 equaling the lowest priority and 4 the highest priority.

This study sought to discover the activities that comprise NA practice, and determine whether those activities vary appreciably across practice settings or due to the level of NA experience. The findings from the NA and NAE evaluator surveys were thus analyzed to discover the average ratings of all respondents and to find any differences that might exist among responses from different settings and among responses provided by NAs at different levels of experience.

Validation of Findings

The subject matter expert panel reviewed the list of 119 activities and selected those they anticipated to receive the lowest and highest frequency and priority ratings, and those requiring the least and most experience to perform (see Table 17). The average frequency, priority and experience ratings were calculated by setting for each of the selected items. In all cases, those activities selected to have high values were all higher than those that had been anticipated to have low values. This provides validation for respondent ratings.

Instrument Reliability Estimates

In order to evaluate the amount of variability associated with the two survey instruments among the respondents, two reliability estimates were calculated. These calculations provide a measure of the internal consistency of the survey. Higher values indicate greater consistency; values greater than 0.90 are considered quite reliable (Guilford, 1956). The estimate of reliability for the NA frequency scale was 0.98 and for the NAE priority scale it was 0.98, indicating limited error and homogeneity of the data (Hopkins, Stanley and Hopkins, 1990).

Frequency of Activity Performance

NA respondents were divided into those working in nursing homes, home health agencies and hospitals. They were also divided into those with varying levels of experience within each of those settings. This created 13 sets of frequency ratings:

Nursing Home

- 1. Less than 1 year of experience
- 2. 1-5 years of experience
- 3. More than 5 years of experience
- 4. Total nursing home responses

Home Health Agency

- 5. Less than 1 year of experience
- 6. 1-5 years of experience
- 7. More than 5 years of experience
- 8. Total home health agency responses

Hospital

- 9. Less than 1 year of experience
- 10. 1-5 years of experience
- 11. More than 5 years of experience
- 12. Total hospital responses

ΑII

13. All responses from all levels of experience in all setting

A study of the average frequency ratings revealed few differences among the frequencies reported by those with differing levels of experience and among those working in different health care settings. See Table 18 for the average frequencies of the activities according to health care setting experience.

Experience Required for Performance

NAEs were asked to rate the experience required for an NA to perform each of the 119 activities. The average and mode of ratings provided by NAEs in each of the three settings may be found in Table 19. Review of the experience ratings showed the activity ratings to be comparable across settings.

Priority

NAEs provided priority ratings for each of the activities. Overall average priority ratings ranged from 1.76 to 3.69. Priority ratings provided by NAEs in

the three settings were remarkably similar (see Table 20).

Time Spent in Different Nursing Activities

NAs were asked to record the numbers of hours spent performing specific categories of activities (see Table 21). An average number of hours spent was calculated for each of seven sets of activities, based on the reported length of shift worked. Because NAs often perform more than one type of activity at a time (e.g., providing emotional support while assisting clients with the activities of daily living), a standardized proportion was calculated by dividing the time reportedly spent in each category of activity by the sum of hours spent in all the activities. The NAs reported spending the greatest amount of time in the following categories: providing care related to activities of daily living (22.45%), communication (15.59%), basic nursing skills (14.04%), addressing client rights/ethical/legal behavior (13.73%) and participating as a member of the health care team (12.86%). NAs reported spending the least amount of time on psychosocial care skills (10.28%).

Activities Not Listed on the Survey

NAs were asked to identify any important activities that were performed in their current practice setting which were not listed in the survey. Approximately 82% reported that the 119 activities listed in the survey were comprehensive and that no activities were missing.

Summary

The 2005 NA Job Analysis study collected data on the frequency and priority of NA activity performance as well as the amount of experience needed to perform activities. In general, the frequency with which NAs performed the activities was consistent across settings. The experience and priority ratings provided by the NAEs were comparable across nursing home, home health agency and hospital settings. The activities listed in the survey represented NA practice across settings.

Table 17. Response Validation				
	NH	HHC	AC	Total Group
High Frequency Activities				•
Use infection control guidelines	3.21	2.81	3.16	3.06
Prevent and provide protection from injuries	2.69	2.26	2.63	2.50
Change incontinence product (e.g., infant, pediatric, elderly)	3.03	2.23	2.75	2.66
Use proper body mechanics	3.39	2.97	3.36	3.26
Identify client/resident	3.20	2.56	3.09	2.98
Low Frequency Activities				
Perform cardiopulmonary resuscitation (CPR)	0.22	0.23	0.24	0.18
Perform Heimlich maneuver	0.19	0.22	0.20	0.15
Give enema	0.34	0.37	0.41	0.33
Care for body after death	0.70	0.62	0.76	0.59
Apply or remove abdominal or breast binders	0.63	0.66	0.75	0.35
High Experience Activities				
Give enema	3.65	3.74	3.61	3.66
Provide ostomy care (e.g., colostomy, ileostomy)	3.35	3.06	3.23	3.19
Apply or remove telemetry wires or change telemetry batteries	3.76	3.84	3.75	3.78
Assist with dressing change	2.68	2.61	2.57	2.62
Implement strategies to care for the angry or potentially violent client	2.66	2.44	2.73	2.63
Low Experience Activities				
Identify self to client by name and job title	1.22	1.20	1.22	1.19
Provide oral/mouth/denture care	1.20	1.21	1.21	1.19
Answer call light	1.64	1.64	1.56	1.58
Use courtesy in communication	1.23	1.20	1.24	1.21
Assist with meal set up	1.25	1.27	1.32	1.26
High Priority Activities				
Use infection control guidelines	3.59	3.58	3.56	3.56
Perform Heimlich maneuver	3.58	3.56	3.57	3.59
Perform cardiopulmonary resuscitation (CPR)	3.54	3.56	3.56	3.57
Recognize and report signs of client's changing condition	3.72	3.68	3.68	3.66
Prevent and provide protection from injury	3.62	3.62	3.58	3.59
Low Priority Activities				
Provide nail care	2.08	2.09	2.14	2.11
Assist client to fill out meal menu	1.74	1.76	1.80	1.76
Apply or remove abdominal or breast binders	2.53	2.48	2.53	2.54
Give enema	2.61	2.61	2.55	2.62
Make bed (e.g., occupied, unoccupied, surgical)	2.06	2.13	2.06	2.09

110	Respond per agency protocol in actual or potential disaster or emergency situations	3.49	3.53	3.48	3.50
111	Encourage client and family to contribute to and follow plan of care	2.96	2.92	2.98	2.95
112	Ask for help when needed	3.53	3.37	3.48	3.45
113	Assist co-workers	3.29	3.28	3.28	3.26
114	Suggest additions or changes to client's plan of care	2.89	2.86	2.91	2.87
115	Assist with admission, discharge or transfer	2.67	2.72	2.65	2.67
116	Participate in performance improvement and cost containment programs	2.36	2.43	2.40	2.38
117	Attend and participate in staff education	2.98	2.98	3.02	2.99
118	Participate in client rounds	2.74	2.66	2.67	2.68
119	Prioritize care based on client(s) schedule (e.g., tests, physical therapy)	2.92	2.90	2.91	2.89

Table 21. Average an	Table 21. Average and Standardized Percentage of Time Spent Performing Sets of Activities	g Sets of	Activities						
				Leng	Length of Shift				
Activity Set	Description	0-1 hour	1-4 hours	5-8 hours	9-12 hours	13-16 hours	17 hours or more	Total Group Average	Standardized Percentage of Time spent
Activities of daily living	(e.g., assist client with walking and transfers; assist with grooming and hygiene; provide for toileting and incontinence care; assist to fill out menu)	0.50	2.24	4.10	4.50	4.49	3.76	4.13	22.45%
Basic nursing skills	(e.g., measure and record intake and output; collect and label specimens, assist with supplemental nutrition; take vital signs; prepare client for test/procedure/surgery; assist with oxygen care; perform basic life support; turn and position client; apply bed alarm; provide skin care; follow infection control guidelines; start aspiration and seizure precautions; apply restraints; recognize and report changes in client conditions)	0.00	1.39	2.91	3.83	3,49	3.45	3.08	14.04%
Restorative skills	(e.g., promote client's independence in self care; assist client in bowel/bladder training; perform/assist with range of motion; assist to ambulate with cane/walker)	0.00	1.19	2.47	2.90	2.86	3.09	2.55	11.04%
Psychosocial care skills	(e.g., promote self esteem; provide comfort and care for dying client; provide emotional support; observe and report mood changes; identify behaviors related to cognitive impairment/ dementia; provide therapeutic environment; care for angry/violent client; report client's cultural and religious preferences, needs, requests; respect client's beliefs)	0.00	1.33	2.47	2.98	2.90	3.77	2.59	10.28%
Communication	(e.g., answer call light; identify self to client; use courtesy in communication; report and record unusual incidents/variances/falls/errors; document and record information accurately; reinforce client and family education)	0.50	1.67	3.64	4.46	4.40	3.95	3.78	15.59%
Client rights/ ethical/legal behavior	(e.g., respect client's need for privacy, right to refuse care, right to be free of restraints, respect client's personal choices, recognize and report abuse/neglect; maintain confidentiality)	0.75	1.63	3.49	4.01	4.40	4.36	3.59	13.73%
Member of the health care team	(e.g., assist co-workers; participate in shift report/ care planning/performance improvement programs; assist with admission/transfer/discharge; provide care based on client's schedule)	0.25	1.35	3.07	3.84	3.73	3.91	3.22	12.86%

CONCLUSION

A nonexperimental, descriptive study was conducted to explore the activities performed by nursing assistants, the amount of experience necessary to complete those activities and the priority of the activities in the provision of safe client care. More than 1,500 NAs and 599 NAEs responded. Findings indicated that:

- NA work is essentially the same in nursing homes, home health agencies and hospitals.
- NAs with less than one year of experience perform the same types of activities at approximately the same frequencies as those with more experience.

The results of this study can be used to evaluate the NNAAP™ Test Plan.

APPENDIX B

2002 NNAAP™

Written (or oral) Exam Content Outline

- I. Physical Care Skills
 - A. Activities of Daily Living: 7% of exam (4 questions)

Hygiene

Dressing and Grooming

Nutrition and Hydration

Elimination

Rest/Sleep/Comfort

B. Basic Nursing Skills: 37% of exam (22 questions)

Infection Control

Safety/Emergency

Therapeutic/Technical Procedures

Data Collection and Reporting

C. Restorative Skills: 5% of exam (3 questions)

Prevention

Self-care/Independence

- II. Psychosocial Care Skills
 - A. Emotional and Mental Health Needs: 10% of exam (6 questions)
 - B. Spiritual and Cultural Needs: 3% of exam (2 questions)
- III. Role of the Nurse Aide
 - A. Communication: 10% of exam (6 questions)
 - B. Client Rights: 15% of exam (9 questions)
 - C. Legal/Ethical Behavior: 5% of exam (3 questions)
 - D. Member of Health Care Team: 8% of exam (5 questions)

APPENDIXC

$Methodology \, Experts$

Mark Reckase, PhD	Michigan State University & Editor – Applied Psychological Measurement	Full professor at Michigan State University, a world renown psychometrician, and the editor of Applied Psychological Measurement (a very prestigious measurement journal). Has also spent many years working for American College Testing and is considered one of the top people in the testing industry. As such, he is very familiar with conducting job analyses and transforming the results into test specifications.
Gene Kramer, PhD	American Dental Association	Director of Testing for the American Dental Association. In this capacity, he is responsible for the practice analyses that provide the basis for their national licensing examinations. Dr Kramer has been managing these practice analyses and other psychometric analyses for over 20 years.
Amy Weaver, MS (ABD)	National Restaurant Association Educational Foundation	Director of Exam Development at the National Restaurant Association's Educational Foundation. In this capacity, she has been involved with job analyses that support their certification examinations.
Lyn Schaefer, PhD	American Council on Education's General Equivalency Diploma Program	Director of Test Development at the American Council on Education. Was previously employed as the director of testing for the American Registry of Diagnostic Medical Sonographers where she was responsible for all phases of the examination including the foundation upon which it was based.
Matt Schulz, PhD	American College Testing	Has worked for American College Testing for many years in several psychometric roles. He is quite knowledgeable about common practices and industry standards with regard to job analyses and practice analyses. He is also familiar with the NCLEX Examination as he was NCSBN's director of testing in the 1980s

APPENDIXD

NA Frequency

Appendix D. NA Fre	equency		
			Total Group Average
# in 2005 Survey	Rank	Activity	Frequency
na24	1	Perform Heimlich maneuver	0.15
na23	2	Perform cardiopulmonary resuscitation (CPR)	0.18
na14	3	Give enema	0.33
na30	4	Apply or remove abdominal or breast binders	0.35
na41	5	Apply or remove telemetry wires or change telemetry batteries	0.58
na35	6	Care for body after death	0.59
na25	7	Apply and remove elastic bandage	0.62
na27	8	Prepare client for diagnostic test, procedure, or surgery	0.67
na40	9	Provide ostomy care (e.g., colostomy, ileostomy)	0.71
na21	10	Apply and remove heat or cold treatments	0.72
na9	11	Assist client to fill out meal menu	0.74
na62	12	Promote client's independence in the care, application and removal of prosthetic and orthotic devices	0.82
na74	12	Recognize and report signs that client may be suicidal	0.82
na116	14	Participate in performance improvement and cost containment programs	0.84
na47	15	Follow seizure precautions	0.85
na15	16	Collect and label stool, urine or sputum specimens	0.88
na83	17	Use validation therapy	0.91
na91	18	Recognize the need for an interpreter	1.02
na94	19	Identify and report barriers to learning	1.05
na33	20	Apply and remove anti-embolic hose or sequential compression devices (SCD)	1.06
na106	21	Report suspicious workplace activity which involves other employees, former employees, clients or visitors	1.08
na93	22	Reinforce client and family education	1.10
na53	23	Apply and monitor restraints per nurse's direction	1.13
na49	24	Use pain scale to check client's pain level	1.15
na110	25	Respond per agency protocol in actual or potential disaster or emergency situations	1.17
na8	25	Provide nail care	1.17
na45	27	Follow protective precautions for immune suppressed client	1.19
na70	28	Participate in client behavior modification program	1.20
na103	29	Provide assistance to a client in resolving grievances and disputes	1.26
na61	29	Assist or encourage family to help with client's care	1.26
na81	29	Implement strategies to care for the angry or potentially violent client	1.26
na72	32	Provide comfort and care for dying client	1.28
na46	33	Transport client off unit or to another setting	1.30
na51	34	Provide care for the client with a sensory impairment	1.33

Appendix D. NA Fre	equency		
			Total Group Average
# in 2005 Survey	Rank	Activity	Frequency
na115	35	Assist with admission, discharge or transfer	1.34
na36	36	Perform and record pulse oximetry	1.36
na85	37	Report client's cultural/religious/spiritual requests, preferences and needs (e.g., food, clergy)	1.38
na52	37	Implement aspiration precautions	1.38
na57	37	Assist with dressing change	1.38
na114	40	Suggest additions or changes to client's plan of care	1.40
na67	40	Assist client with recreational activities	1.40
na42	42	Measure and record client's weight and/or height	1.41
na117	43	Attend and participate in staff education	1.46
na44	44	Assist client with turning, coughing and deep breathing or incentive spirometry	1.47
na71	45	Assist with individualized client activities	1.51
na84	46	Assist client to participate in groups and other activities	1.53
na92	46	Report and record unusual incidents/variances (e.g., errors, injuries, falls)	1.53
na29	48	Assist with oxygen care	1.56
na50	48	Check for color, movement and sensation (CMS) of extremities	1.56
na58	50	Provide urinary catheter care	1.62
na19	51	Use specialty beds for care of client	1.63
na79	52	Implement strategies to care for the client with cognitive impairment (e.g., dementia, Alzheimer's disease)	1.69
na65	52	Assist client in bowel and/or bladder training	1.69
na60	54	Feed client who cannot feed self	1.76
na80	55	Provide a therapeutic environment	1.79
na111	55	Encourage client and family to contribute to and follow plan of care	1.79
na18	55	Assist with supplemental nutrition	1.79
na66	55	Perform/assist client with range of motion exercises	1.79
na82	59	Use reality orientation (e.g., time, place, person)	1.83
na118	60	Participate in client rounds	1.87
na26	61	Provide physical comfort measures (e.g., back rubs)	1.92
na55	62	Dispose of biohazardous waste properly	1.93
na109	63	Participate in shift report	1.94
na95	64	Use approved medical terminology in written and verbal communication	1.95
na119	65	Prioritize care based on client(s) schedule (e.g., tests, physical therapy)	1.99
na99	65	Promote client's right to be free of restraints	1.99
na32	67	Transfer client using assistive devices	2.05
na5	68	Give or assist client with shower/bath	2.07
na78	69	Identify behaviors commonly related to a client with cognitive impairment (e.g., dementia, Alzheimer's disease)	2.10
na20	70	Take and record client's vital signs (VS)	2.15
na1	71	Provide oral/mouth/denture care	2.17
na16	71	Estimate and record amount/percentage of meal intake	2.17

			Total Group Average
# in 2005 Survey	Rank	Activity	Frequency
na108	73	Use identified channels/chain of command to voice questions, concerns, suggestions or complaints	2.18
na77	74	Observe and report mood changes	2.19
na37	75	Apply and respond to client safety alarms	2.20
na63	76	Assist client to ambulate with a device such as a cane or walker	2.21
na17	77	Ensure client receives diet as ordered	2.24
na38	78	Measure and record intake and output	2.25
na102	79	Provide explanation of care to client or family	2.28
na98	80	Accept client's right to refuse care	2.30
na3	81	Assist client with walking	2.34
na56	82	Recognize and report signs and symptoms of client's changing condition	2.35
na12	83	Assist with grooming needs (e.g., shaving, hair care, cosmetics)	2.39
na59	84	Assist with meal set-up	2.45
na22	85	Prevent and provide protection from injuries	2.50
na104	86	Promote freedom from abuse, mistreatment, and neglect	2.51
na13	87	Encourage client to be independent	2.54
na86	88	Respect client's religious and cultural beliefs and practices	2.56
na112	89	Ask for help when needed	2.58
na10	90	Assist client with dressing and undressing	2.65
na31	91	Turn and reposition client	2.66
na6	91	Change incontinence product (e.g., infant, pediatric or elderly)	2.66
na34	93	Make bed (e.g., occupied, unoccupied, or surgical)	2.67
na101	94	Respect client's personal choices, including advance directives	2.69
na76	95	Provide emotional support	2.70
na43	96	Provide preventive skin care (e.g., observing for breakdown, applying lotion, applying heel pads, or apply elbow protectors)	2.74
na11	97	Provide for toileting needs	2.75
na7	98	Provide client with adequate fluids	2.76
na73	99	Provide client with a feeling of security	2.77

APPENDIX G.1

2005 NA Job Analysis Survey Questionnaires

NATIONAL COUNCIL OF STATE BOARDS OF NURSING

NURSING ACTIVITY STUDY

This questionnaire is part of a comprehensive study of the practice of nurse aides in the United States. The study is being performed by the National Council of State Boards of Nursing.

INSTRUCTIONS

Please read each question carefully and respond by filling in the oval of the response that most closely represents your answer. Most questions have several alternative answers. Choose the answer that best applies to your practice and fill in the appropriate oval(s). A few questions ask you to write in information. Print your answer legibly in the space provided following the question.

You will notice that many questions ask you to report what you did on your <u>last day of work</u>. It is important that we obtain information from nurse aides experiencing both typical and unusual workdays, so please answer questions according to what you on your last day of work even if that day was not typical.

For the purposes of this study, "nurse aides" are individuals, regardless of title, assisting with the delivery of direct nursing care to clients. The "client" is defined as an individual or individual plus family (or significant other(s)). Clients are the same as "residents" or "patients". In addition, "last day of work as a nurse aide" also refers to the last shift you worked.

Your answers will be kept confidential. Your individual responses to the questions will not be released.

MARKING INSTRUCTIONS:

- Use a No. 2 pencil only.
- Do not use pens.
- Make heavy dark marks that fill the oval completely.
- If you want to change an answer, erase completely.

RIGHT MARK WRONG MARKS $\emptyset \otimes \bigcirc$

SECTION 1: WORK ENVIRONMENT

NOTE: Answer all of the following questions based on your last day as a nurse aide.

1. Which of the following best describes your employment setting(s) on the last day you worked a nurse aide (Review the entire list and select ALL that apply)

HOSPITALS or ACUTE CARE SETTINGS

- Central supplyChemical dependency unit
- Emergency room
- Extended care facility/Rehabilitation unit
- In-patient hospice care Intensive care unit
- Intermediate care/Step down unit
- Labor and delivery unit
- Medical/surgical unit (includes sub-specialties like orthopedics, oncology, etc.)
- NurseryOperating room
- Pediatric unit
- Postpartum/maternity unit Psychiatric unit
- Recovery roomOther (Please specify)

NURSING HOME

- Intermediate care unit
- Personal care unit
- Skilled care unit Sub-acute unit
- Other (Please specify)

COMMUNITY/HOME HEALTH CARE

- Clinic/outpatient unit/ambulatory surgical care Home health in client's residence
- Hospice care in client's residenceOther (*Please specify*)

- Approximately how long have you worked in the employment setting(s) you marked in Question 1? (Select only ONE answer)
 - 6 months or less
 - 7 to 11 months

 - 1 year
 - 2 years 3 years

 - 4 years
 - 5 years

 - 6 years
- 8 years
 9 years
 10 years

3. Which of the following best describes your title in the employment setting(s) you marked in Question 1? (Select only ONE answer) Nurse aide/Nursing assistant Orderly Certified Nursing assistant Personal or patient care attendant/assistant Home health aide Certified home health aide Medication aide/technician Homemaker	8. Which of the following best describes the condition of most of the clients to whom you provided care on your last day of work? (Select ALL that apply) Well clients, possibly with minor illnesses OB (Maternity) clients Clients with stabilized chronic conditions Clients with unstabilized chronic conditions Clients with acute conditions, including clients with medical, surgical or critical conditions Clients at end of life Clients with behavioral/emotional conditions Other (Please specify)
Charge aide/Senior aide Patient care technician Psychiatric aide Dietary aide Care partner Other (<i>Please specify</i>)	9. Which of the following best describes the location of the employment setting(s) you marked in Question 1? (Select only ONE answer) Urban/Metropolitan area Suburban area Rural area I do not know
4. How many <u>hours per week</u> do you work as a nurse aide in the employment setting(s) you marked in Question 1? (Select only ONE answer) 1.5 hours 36-40 hours 6-10 hours 41-45 hours 11-15 hours 46-50 hours 11-25 hours 51-55 hours 21-25 hours 56-60 hours 22-25 hours 60 hours or more	10. To how many clients were you assigned to provide care on your last day of work? (Select only ONE answer) 0 clients 1 clients 21 clients 1 client 12 clients 22 clients 2 clients 13 clients 23 clients 3 clients 14 clients 24 clients 4 clients 15 clients 25 clients 5 clients 16 clients 26 clients 6 clients 17 clients 27 clients 7 clients 18 clients 28 clients
5. What shift do you usually work in the employment setting(s) you marked in Question 1? (Select only ONE answer) Rotating shift Days (8, 10, or 12 hour shift) Evenings (8, 10, or 12 hour shift) Nights (8, 10, or 12 hour shift) Other (Please specify)	8 clients 9 clients 29 clients 30 or more clients 10 clients 11. What is the total length of time you have worked as a nurse aide? (Select only ONE answer) 6 months or less 8 years
6. How many hours did you work on the last shift you worked? Less than 1 hour 1 hour - 4 hours 5 - 8 hours 9 - 12 hours 13 - 16 hours 17 hours or more	○ 7 to 11 months ○ 9 years ○ 1 years ○ 10 years ○ 2 years ○ 11 years ○ 3 years ○ 12 years ○ 4 years ○ 13 years ○ 5 years ○ 14 years ○ 6 years ○ 15 years or more
7. Which of the following best describes the ages of most of the clients to whom you provided care on your last day of work? (Select ALL that apply) Newborns (less than 1 month) Infants/children (1 month-12 years) Adolescents (ages 13-18) Young Adults (ages 19-30) Adults (ages 31-64) Adults (ages 65-85) Adults (over the age of 85)	
P.	age 2

SECTION 2: ACTIVITIES PERFORMED

This section contains a list of activities performed by nurse aides. Some of the activities might not apply to your job. For each activity, please think about what you did during your last day of work as a nurse aide.

For each activity record how often you did this activity on your <u>last day of work as a nurse aide</u>.

EXAMPLES	0 Never Performed	1 or 5	semi_C 2 A Moderate Amount	3 Often	10 Times or More per Day
If you did NOT make a client's bed on your last day of work, you would fill in the oval in the column labeled "0 Never Performed (0 Times)"	0	①	2	3	4
If you transported a client 5 times on your last day of work, you would fill in the oval in the column labeled "2 A Moderate Amount (3 - 5 Times)"	0	1	2	3	4
 If you restocked unit supplies 15 times on your last day of work, you would fill in the oval in the column labeled "4 Very Often (10 Times or More per Day)" 	0	1	2	3	4

SECTION 4: EDUCATIONAL BACKGROUND

1. What type of preparation did you have for your current work as a nurse aide? (Select ALL that apply)
 Previous work experience
 High school course
 Classes in a nursing education program
(LPN or LVN or RN)
Course offered by current employer
 Course offered by previous employer
 Course offered by community or junior college
 Course offered by technical or vocational school
 Course or training while in military service
○ None

Other (Please specity)

2.	Besides basic nurse aide skills, which of the following areas
	of knowledge/skill were included in the course(s) or classes
	you marked in Question 1 of this section?
	(Select ALL that apply)
	Administration of oral and/or topical medications
	Administration of insulin
	 Drawing blood from veins for laboratory testing
	 Blood glucose testing (finger-stick testing)
	 Emergency care procedures other than basic life support
	or CPR
	 Special care required by infants and/or children
	 Special care required by geriatric (elderly) clients
	 Special care required by psychiatric clients
	 Special care required by respiratory clients
	Other (Please specify)
