Presenter

NCSBN Information Technology Department

Every day, Boards of Nursing work to protect the public through the regulation of nursing. To support that mission, NCSBN created Nursys, the only national nurse licensure and discipline database. Data is provided directly from Boards of Nursing, making Nursys a primary source equivalent. Nursys eNotify is a free notification service that helps institutions receive timely nurse licensure and discipline information.

When information is updated in Nursys, eNotify automatically delivers real-time notifications to your inbox, helping you stay informed. Licenses expire, statuses change, and disciplinary actions can occur. If you employ nurses, staying informed about these changes is an important part of protecting patients and your institution.

With eNotify, institutions can receive notifications on license status changes, expiration updates and renewal reminders, publicly available disciplinary actions, Board-issued public notifications, multi-state and single-state licensure changes within the nurse licensure compact, and the authorization to practice map shows where each nurse can practice.

More than 16,000 healthcare institutions are already using Nursys eNotify, and getting started is easy. Visit [Nursys.com](https://www.nursys.com) and fill in some brief information about your institution to create an administrator account. You can then add additional users as needed and start enrolling nurses individually or through a bulk upload. Larger organizations also have the options for enrolling their nurses directly from their systems.

And your data is protected, as Nursys is GovRAMP-authorized and meets strict security and privacy requirements. Once enrolled, your institution will begin receiving notifications about the nurses you monitor. Nursys eNotify is the most reliable and efficient system of its kind, and it's free. Save time, money and resources by enrolling your institution today at [Nursys.com](https://www.nursys.com).
